MERCER COUNTY

2018 COMMUNITY

HEALTH ASSESSMENT

ACKNOWLEDGMENTS

The following partners led the Greater Mercer Public Health Partnership (GMPHP) Community Health Needs Assessment (CHA).

GREATER MERCER PUBLIC HEALTH PARTNERS

The Greater Mercer Public Health Partnership Community Health Assessment (CHA) was developed with the help of the organization's Executive Board and Membership Organizations, and under the leadership of its Project Director, Carol Nicholas, BA, RN.

GREATER MERCER COUNTY PUBLIC HEALTH PARTNERSHIP EXECUTIVE BOARD

Members of the Greater Mercer Public Health Partnership CHA Executive Board include:

Mary Jo Abbondanza	St Francis Medical Center
Karen Buda	Community Member
Stephanie Carey	Health Officer Hopewell/Pennington Borough
Carol Chamberlain	Health Officer Lawrence Health Department
Jeremye Cohen	Capital Health Medical Center
Peter Crowley	Community Member
Ann Dorocki	Mercer County Human Services
Robert English	Health Officer Hopewell Health Department
Diane Grillo	Robert Wood Johnson - Hamilton Hospital
Jeff Grosser	Health Officer Princeton Health Department
Darlene Hanley	St Lawrence Rehabilitation Center
Evelyn Hawrylak	St Francis Medical Center
Barbara Johnson	Community Member
Jane Millner	St Lawrence Rehabilitation Center
Steve Papenberg	Community Member
Jeff Plunkett	Health Officer Hamilton Health Department
Kristen Reed	Ewing Health Department/Mercer County
Lauren Stabinsky	Robert Wood Johnson Hamilton Hospital
Jill Swanson	West Windsor/Hightstown/Robbinsville Health Department
Giovanna Guarraggi	Hamilton Health Department
Yvette Graffie-Cooper	Health Officer Trenton Health Department
Greg Paulson	Trenton Health Team

GMPHP STEERING COMMITTEE CONSULTANT ADVISORS

Steering Committee Technical Advisors:

- New Solutions Inc. (Nancy Erickson[1])

Questions regarding the Community Needs Assessments should be directed to Greater Mercer Public Health Partnership at GMPHP.NJ@gmail.com.

---

1 The CHA's development consultants, New Solutions, Inc., have planned and conducted numerous community needs assessments and implementation plans with multiple organizations including individual hospitals, health systems, other health care and community organizations such as consortia comprised of a wide range of participant organizations. The NSI team, of which two are Ph.D. prepared, includes: planning consultants, market researchers, epidemiologists, computer programmers and data analysts. NSI has extensive regional and local community knowledge of health issues, community services and provider resources for the community reviewed by this assessment. This expertise, as well as the methodological and technical skills of the entire staff, was brought to bear in conducting this Community Health Needs Assessment.

TABLE OF CONTENTS

EXECUTIVE SUMMARY

Background

In 2018, the Greater Mercer County Public Health Partnership (GMPHP) undertook development of its third Community Health Assessment (CHA). The CHA was designed to ensure that Mercer County public, private, and community-based organizations continue to effectively and efficiently serve the needs of their communities. The CHA was developed in accordance with all federal rules and statutes, specifically PL 111-148 (The Affordable Care Act) which added Section 501(c) to the internal revenue code and, in accordance with New Jersey regulations N.J.A.C. 8:52 10.1-10.3 governing local boards of health. The latter regulations govern: the collection, computation, interpretation, and communication of vital statistics and health status measures within one or more New Jersey counties; the identification of threats to health; the assessment of health service needs; and the analysis, communication, and publication of access, utilization, quality, and outcome of personal health issues. This needs assessment was undertaken in this context and developed for the purpose of enhancing the quality of life throughout Mercer County. This assessment builds upon the CHAs conducted in 2012 and 2015.

The CHA uses detailed secondary public health and demographic data at state, county and municipality or zip code levels, as well as primary data collected through a community health survey, focus groups, and a World Café meeting. All data elements were reviewed by GMPHP members to determine key issues impacting the health of Mercer County residents. The Methodology Section of this CHA details the data collection process and analysis.

Service Area

Mercer County is located in west central New Jersey, bordering Somerset and Hunterdon counties to the north and Middlesex, Monmouth and Burlington counties to the east and south. The Delaware River and Pennsylvania are on the western edge of the State. The county encompasses a land mass of 226.1 square miles with seven townships, three boroughs, and 34 zip codes. The county and its subdivisions are now largely suburban with Trenton as its principal urban center. The county is home to 371,183 residents, and ten percent of the U.S. population is within the 75 miles of Mercer County. Trenton is the capital of the U.S. state of New Jersey and the county seat of Mercer County.

Mercer County

The county is made up of urban, suburban and rural areas. Wide disparities in wealth exist within some communities. The high cost of living and a lack of affordable housing has led to concerns over a dwindling middle class. The following exemplifies a few social and economic differences identified in this review.

- Mercer County has a slightly lower proportion of whites than residents of New Jersey.
- Mercer County's Asian population grew by 29% between 2010 and 2018, and Hispanic and Latino populations grew 20% during the same timeframe.
  - ➢ Trenton zip code 08611 has the highest concentration of Hispanics at 59.5%.
  - ➢ Princeton has the largest Asian population, 29.8%.
- Mercer County's population grew 1.3% compared to 2% for New Jersey.
- The County's population distribution by age is similar to that of the State.
- The County's median household income was over $73,966 in 2016 compared to $73,702 in New Jersey.
  - ➢ Princeton and Hopewell had the highest median household income in the service area at $124,954 and $122,525, respectively.
  - ➢ Trenton zip code 08608 had the lowest median household income in the county ($15,855).
- Mercer County's unemployment rate for 2016 was 5.6%, above the statewide rate of 5.2%.
  - ➢ Trenton/Hamilton zip code 08611 had the highest unemployment rate (8.8%).
- Poverty rates in Mercer County for families, people, and children, were higher than the State.
  - ➢ Children in Trenton zip code 08611 had among the highest rate of poverty at 37.5%.
- The percent of Mercer County residents with a graduate or professional degree was 19.5% compared to 14.4% of New Jersey residents.
  - ➢ 50.4% of Princeton residents had a graduate or professional degree compared to only 2.0% of Trenton zip code 08608 residents.
  - ➢ 37.8% of Trenton zip code 08608 residents failed to complete high school.
- Less than 12% of Mercer County residents have limited English proficiency in the county.
  - ➢ Residents of Trenton zip code 08611 had a rate of limited English proficiency that was over 34%.
  - ➢ 41% of Mercer County children were eligible for free school lunches.

In addition to social and demographic differences, disparities in incidence and prevalence of illness of Mercer County residents identified in this CHA include:

- The age-adjusted mortality rate for heart disease among Whites was higher than the rate for Blacks and Hispanics.
- The rate of low birth rate babies was, and has been, higher among Blacks than for both White or Hispanic residents since 2011.
- The Mercer County Black infant mortality rate was more than double that of Hispanics in 2016.
- The inpatient use rate in Mercer County (171.7 per 100,000) was higher than that of the State, and the zip codes of Trenton/Ewing zip code 08618, Trenton zip code 08628 and Trenton/Hamilton (08609) all have hospital use rates well above the statewide rate.
- ED use rates for Mercer County were also above those of the State and residents of Trenton zip code 08609 had an ED use rate more than double that of the County.
- Trenton zip codes 08608 and 08609 had Community Need Index (CNI) scores that were among the highest in the County while Trenton/Hamilton zip code 08690 had among the lowest CNI score in the county.
- The rate of persons hospitalized with a heart attack was highest in Trenton zip code 08608 in 2016.
- Among patients who used a hospital, the rate for stroke was highest among residents of Trenton zip code 08638.
- The highest rate of diabetes, renal disease, COPD, and hypertension were seen in patients from Trenton zip code 08608.

Top Health Issue

The Greater Mercer County Public Health Partnership considered primary and secondary data to determine the top health issue. Prioritization was based on capacity, resources, competencies, and needs specific to the populations served. The selected issue is within the Partnership's, competency and resources to impact in a meaningful manner and is believed to be a root cause of many of the chronic health issues facing residents of the county. For these reasons, *"to help Mercer County residents achieve a healthy weight and lifestyle throughout their lives"* was selected as the main priority issue for the 2018-2021 CHA.

Assist Mercer County Residents Achieve a Healthy Weight and Lifestyle Throughout Their Lives

Maintaining a healthy weight is important for health. In addition to lowering the risk of heart disease, stroke, diabetes and high blood pressure it can also lower the risk of several different cancers. An individual's weight, waist size and the amount of weight gained since one's mid 20's can have serious health implications. These factors can strongly influence an individual's chances of developing many diseases and conditions including:

- Cardiovascular disease, heart attack, stroke;
- Diabetes;
- Cancer;
- Arthritis;
- Gallstones;
- Asthma;

- Cataracts;
- Infertility;
- Snoring;
- Sleep apnea.

To be in a healthy range, your weight isn't more than 10 pounds over what you weighed when you were in your mid-twenties. Because most adults between the ages of 18-49 gain one to two pounds each year, stopping and preventing weight gain should be a priority. Gaining weight as you age increases the likelihood of developing one or more chronic diseases.

The key to achieving and maintaining a healthy weight isn't about short-term dieting changes. It's about a lifestyle that includes healthy eating, regular physical activity and balancing the number of calories you consume with the number if calories your body uses.

Genetics affect the amount of body fat stored, where fat is distributed, and how efficiently the body converts food into energy. Family eating and physical activity habits play a role in the development of obesity. Prolonged inactivity results in calorie imbalance, the intake of calories is higher than the burning of calories. Often, inactivity is a result of other medical problems like arthritis or injuries. An unhealthy diet, high in calories and lacking in fruits and vegetables, is a significant contributor to weight gain. Research has linked social and economic factors to obesity. Socioeconomic factors include not having safe areas to exercise, cultural traditions of eating unhealthy and obese family members.

Approximately 40% of the U.S. population, or 93.3 million adults, are affected by obesity according to the 2015-2016 National Center for Health Statistics data brief. [2] But some groups are disproportionately impacted. For example, Hispanics (47%), non-Hispanic Blacks (46.85) had the highest age-adjusted prevalence of obesity followed by non-Hispanic Whites (37.9%) and non-Hispanic Asians (12.7%). The association between obesity and income or education level is complex and differs by age, sex and ethnicity.

- Overall, men and women with college degrees had lower obesity prevalence compared to those with less education.
- By race/ethnicity, the same obesity and education pattern was seen among non-Hispanic White, non-Hispanic Black, and Hispanic women, and also among non-Hispanic White men, although the differences were not all statistically significant. Although the difference was not statistically significant among non-Hispanic Black men, obesity prevalence increased with educational attainment. Among non-Hispanic Asian women and men, and Hispanic men, there were no differences in obesity prevalence by education level.
- Among men, obesity prevalence was lower in the lowest and highest income groups compared with the middle-income group. This pattern was seen among non-Hispanic White and Hispanic men. Obesity prevalence was higher in the highest income group than in the lowest income group among non-Hispanic Black men.
- Among women, obesity prevalence was lower in the highest income group than in the middle and lowest-income groups. This pattern was observed among non-Hispanic White, non-Hispanic Asian, and Hispanic women. Among non-Hispanic Black women, there was no difference in obesity prevalence by income.

---

[2] https://www.cdc.gov/obesity/data/adult.html

Obesity can occur at any age, even among young children. Hormonal changes and physical inactivity in older individuals also increase risk. The amount of body muscle decreases with age, leading to a decrease in metabolism. Quitting smoking is also associated with weight gain, sometimes resulting in obesity. Structured smoking cessation programs can help mitigate the effects of weight gain associated with quitting. Not getting enough sleep or conversely getting too much sleep can cause changes in the hormones that increase appetite and contribute to weight gain.

Poor nutrition and a lack of a healthy diet pattern, and regular physical activity, are health behaviors that contribute to obesity. A healthy diet pattern is one that emphasizes eating whole grains, fruits, vegetables, lean protein, low fat and fat-free dairy products, and drinking water. Healthy activity patterns include 150 minutes of moderate intensity activity or 75 minutes of vigorous activity or a combination of both, along with two days of weight training per week.

- Nearly 34% of Mercer residents reported a BMI >=30 in 2016.
- 15.2/1,000 Mercer County residents who used a hospital service in Mercer County had a diagnosis of obesity compared to 14.1/1,000 New Jersey residents.
    - ➢ Obesity rates were found to be among the highest in Trenton zip code 08608 (22.1) and Ewing (23.3).
- Between 2014-2016 the percent of Mercer County residents reporting no leisure time activity trended upwards from 19.5% in 2014 to 29.1% in 2016.
- More than 40% of all survey respondents claimed to have hypertension, high cholesterol or a weight problem.
- Obesity was the number one concern among survey respondents from Mercer.
- 44% of Mercer County service area residents indicating obesity said they were under a physician's care for the issue, while 32% were monitoring it on their own.

Healthy weight programs are available in Mercer County in both inpatient and outpatient clinic settings and include Bariatrics wellness programs, the RWJUH Bariatric surgery program offering both surgical and non-surgical weight. A bariatric surgery and medically supervised weight loss program is also available at Capital Health at the Capital Health Metabolic and Weight Loss Center. St. Francis Medical Center in Trenton also offers Bariatric surgery with a multi-disciplinary approach to the care of patients.

Interfaith caregivers of Mercer County offer a free 24-week session for seniors at risk of osteoporosis to teach the benefits of exercise, nutrition and safety, drug therapy and lifestyle factors. The program was developed by New Jersey Department of Health and the North Jersey Regional Arthritis Center. The Mercer County nutrition project for older adults offers meals in settings that bring seniors together for activities and social interaction. Lunch is provided Monday-Friday at 12 sites throughout the County. The program also arranges services including nutrition education/nutrition counseling and other health, educational and recreational programs. The nutrition project for older adults also participates in the senior Farmer's Market program, which was developed to provide low income seniors with checks they can use to purchase fresh produce grown by New Jersey farmers.

In 2015, the Hamilton YMCA launched a series of healthy living programs in an effort to combat a variety of chronic diseases. Three programs, ACT Youth Weight Management and Healthy Ways Adult Weight Management and YMCA Diabetes Prevention Program are closely related to this year's goal of assisting Mercer County residents achieve and maintain a healthy weight and lifestyle throughout their lives. Mercer Street Friends Food Bank leads the community response to hunger in Mercer County, channeling

2.7 million pounds of food and groceries to a network of 80 local food partners, shelters, soup kitchens, meal sites, schools, senior and disabled programs and low-income housing sites.

In addition to the prioritized needs discussed above, this CHA identifies the following as additional health needs for the communities:

- Mental health and substance abuse;
- Chronic disease;
- Access to care/transportation;
- Coordination and communication;
- Cancer;
- Cardiovascular disease/stroke;
- Diabetes;
- Underserved populations/healthy equity;
- Chronic respiratory diseases and asthma;
- Chronic diabetes;
- Hypertension;
- Food security;
- Safe recreational spaces; and
- Health concerns related to aging.

Relationship of the State Improvement Plan (SHIP) to the GMPHP Plan

Healthy New Jersey 2020 (HNJ2020), the State Health Improvement Plan (SHIP) was the result of a multiyear process to obtain input from a diverse group of stakeholders from throughout the State. The SHIP includes over one hundred health improvement objectives. However, the HNJ 2020 leading health indicator have been the focus of the state's effort over the last several years. These indicators include:

- Access to health care
- Improve birth outcomes
- Increase childhood vaccination
- Reduce the burden of heart disease and stoke
- Prevent obesity

These leading health indicators are related to the state's overarching goals of:
1. Achieving high quality, longer lives free of preventable disease, disability, injury and premature death.
2. Achieving health equity, eliminate disparities and improve health for all people.
3. Creating social and physical environments that promote good health for all.
4. Promoting quality of life, healthy development and healthy behaviors across all life stages.

Similarly, the overarching goal of the 2018 GMPHP Plan "to help Mercer County residents achieve a healthy weight and lifestyle throughout their lives", is viewed as an underlying issue related to the each of the state's 4 overarching goals. The importance of maintaining a healthy weight is a significant factor in many preventable diseases and disabilities. Eating a healthy diet and getting regular exercise is important to promote quality of life and healthy development and, are behaviors which are important across all stages of life. Creating environments which promote heathy lifestyles and ensure safe spaces

for physical and social activities is similarly important for maintaining healthy lifestyles. Lastly ensuring all people have access to good nutritional food to maintain appropriate weight helps to reduce many of the health disparities that exist in our communities.

Three of the 5 leading health indicators for New Jersey have met the targets set forth in the SHIP plan these include: birth outcomes, teen obesity and deaths due to heart disease. Access to primary care, childhood immunization and adult obesity targets are yet to be achieved. GMPHP believes that it's overarching goal to help Mercer County residents achieve a healthy weight and lifestyle throughout their lives is paramount to reducing adult obesity; that access to care must be viewed broadly, and not just with regard to medical care, but also with regard to access to services that promote healthy lifestyles. Lastly, GMPHP believes that achieving lifestyle changes that promote healthy behaviors translates to a variety of health behaviors including healthy diet, exercise and health behavioral changes that promote early screening, detection and vaccination against diseases.

1.   *INTRODUCTION*

In 2018, the Greater Mercer County Public Health Partnership (GHPHP) undertook development of its third Community Health Assessment (CHA). The CHA was designed to ensure that Mercer County hospitals and other Mercer County public, private, and community-based organizations continue to effectively and efficiently serve the needs of their communities. The CHA was developed in accordance with all federal rules and statutes, specifically PL 111-148 (The Affordable Care Act) which added Section 501(c) to the internal revenue code and, in accordance with New Jersey regulations N.J.A.C. 8:52 10.1-10.3 governing local boards of health. The latter regulations govern: the collection, computation, interpretation, and communication of vital statistics and health status measures within one or more New Jersey counties; the identification of threats to health; the assessment of health service needs; and the analysis, communication, and publication of access, utilization, quality, and outcome of personal health issues. This needs assessment was undertaken in this context and developed for the purpose of enhancing the quality of life throughout Mercer County. This assessment builds upon the CHAs conducted in 2012 and 2015. See **Appendix A** for the 2015 Community Health Improvement Plan Summary Update.

The CHA uses detailed secondary public health and demographic data at state, county and municipality or zip code levels, as well as primary data collected through a community health survey, focus groups, and a World Café meeting. All data elements were reviewed by GMPHP members to determine key issues impacting the health of Mercer County residents. The Methodology Section of this CHA details the data collection process and analysis.

The CHA data sources include *Healthy People 2020* and the County Health Rankings, Census Bureau, and CDC, to name a few. *Healthy People 2020* and County Health Rankings, which are described below, also provide benchmarks for county-specific indicators.

- *Healthy People 2020* is a 10-year agenda to improve the nation's health that encompasses the entire continuum of prevention and care. For over three decades *Healthy People* has established benchmarks and monitored progress over time to measure the impact of prevention activities. *Healthy People 2020* benchmarks are used throughout the report to assess the health status of residents.
- *County Health Rankings*, published by the University of Wisconsin Population Health Institute and the Robert Wood Johnson Foundation, rank the health of nearly all counties in the United States. The rankings look at a variety of measures that affect health such as high school graduation rates, air pollution levels, income, rates of obesity and smoking, etc. These rankings are also used throughout the report to measure the overall health of Mercer County residents. County rates are also compared to statewide rates.

The GMPHP needs assessment was undertaken and developed for the purpose of enhancing the health and quality of life throughout the community. To this end, a broad array of information both internal and external was used to understand recent health indicators and the opportunities to provide a positive impact on health and wellness. In addition to the priority area mentioned below, other significant needs determined through this process include:

- Mental Health and Substance Abuse;
- Chronic Disease;
- Access to care/transportation;
- Coordination and Communication;

- Cancer;
- Cardiovascular disease/stroke;
- Diabetes;
- Underserved populations/health equity;
- Chronic respiratory disease and asthma;
- Chronic diseases;
- Hypertension;
- Food Security;
- Safe Recreational Spaces; and
- Health Concerns related to Aging

Top Health Issue

GMPHP, in its review of both primary and secondary source data, determined to work on one global priority it believes is the root cause of most of the health issues or concerns raised during the assessment. The priority area was selected using criteria that considered population health impact and whether the selected priority areas would be within GMPHP's purview, competency and resources to implement in a meaningful manner. The top priority area chosen was to assist Mercer County residents achieve and maintain a healthy weight and lifestyle throughout their lives.

> *Reaching and maintain a healthy weight is important to overall health and can help individuals prevent and control many diseases and conditions. Individuals who are overweight or obese are at higher risk of developing serious health problems including heart disease, high blood pressure, type 2 diabetes, arthritis and some cancers. Poor nutrition, unhealthy eating habits, and lack of physical activity are behaviors that contribute to overweight and obesity.*

Assist Mercer County Residents Achieve a Healthy Weight and Lifestyle Throughout Their Lives

Maintaining a healthy weight is important for health. In addition to lowering the risk of heart disease, stroke, diabetes and high blood pressure it can also lower the risk of several different cancers. An individual's weight, waist size and the amount of weight gained since one's mid 20's can have serious health implications. These factors can strongly influence an individual's chances of developing many diseases and conditions including:

- Cardiovascular disease, heart attack, stroke;
- Diabetes;
- Cancer;
- Arthritis;
- Gallstones;
- Asthma;
- Cataracts;
- Infertility;
- Snoring;
- Sleep apnea.

To be in a healthy range, your weight isn't more than 10 pounds over what you weighed when you were in your mid-twenties. Because most adults between the ages of 18-49 gain one to two pounds each year, stopping and preventing weight gain should be a priority. Gaining weight as you age increases the likelihood of developing one or more chronic diseases.

The key to achieving and maintaining a healthy weight isn't about short-term dieting changes. It's about a lifestyle that includes healthy eating, regular physical activity and balancing the number of calories you consume with the number if calories your body uses.

Genetics affect the amount of body fat stored, where fat is distributed, and how efficiently the body converts food into energy. Family eating and physical activity habits play a role in the development of obesity. Prolonged inactivity results in calorie imbalance, the intake of calories is higher than the burning of calories. Often, inactivity is a result of other medical problems like arthritis or injuries. An unhealthy diet, high in calories and lacking in fruits and vegetables, is a significant contributor to weight gain. Research has linked social and economic factors to obesity. Socioeconomic factors include not having safe areas to exercise, cultural traditions of eating unhealthy and obese family members.

Approximately 40% of the U.S. population, or 93.3 million adults, are affected by obesity according to the 2015-2016 National Center for Health Statistics data brief. But some groups are disproportionately impacted. For example, Hispanics (47%), non-Hispanic Blacks (46.85) had the highest age-adjusted prevalence of obesity followed by non-Hispanic Whites (37.9%) and non-Hispanic Asians (12.7%). The association between obesity and income or education level is complex and differs by age, sex and ethnicity.

- Overall, men and women with college degrees had lower obesity prevalence compared to those with less education.
- By race/ethnicity, the same obesity and education pattern was seen among non-Hispanic White, non-Hispanic Black, and Hispanic women, and also among non-Hispanic White men, although the differences were not all statistically significant. Although the difference was not statistically significant among non-Hispanic Black men, obesity prevalence increased with educational attainment. Among non-Hispanic Asian women and men, and Hispanic men, there were no differences in obesity prevalence by education level.
- Among men, obesity prevalence was lower in the lowest and highest income groups compared with the middle-income group. This pattern was seen among non-Hispanic White and Hispanic men. Obesity prevalence was higher in the highest income group than in the lowest income group among non-Hispanic Black men.
- Among women, obesity prevalence was lower in the highest income group than in the middle and lowest-income groups. This pattern was observed among non-Hispanic White, non-Hispanic Asian, and Hispanic women. Among non-Hispanic Black women, there was no difference in obesity prevalence by income.[3]

Obesity can occur at any age, even among young children. Hormonal changes and physical inactivity in older individuals also increase risk. The amount of body muscle decreases with age, leading to a decrease in metabolism. Quitting smoking is also associated with weight gain, sometimes resulting in obesity. Structured smoking cessation programs can help mitigate the effects of weight gain associated with

---

[3] https://www.cdc.gov/obesity/data/adult.html

quitting. Not getting enough sleep or conversely getting too much sleep can cause changes in the hormones that increase appetite and contribute to weight gain.

Poor nutrition and a lack of a healthy diet pattern, and regular physical activity, are health behaviors that contribute to obesity. A healthy diet pattern is one that emphasizes eating whole grains, fruits, vegetables, lean protein, low fat and fat-free dairy products, and drinking water. Healthy activity patterns include 150 minutes of moderate intensity activity or 75 minutes of vigorous activity or a combination of both, along with two days of weight training per week.

- Nearly 34% of Mercer residents reported a BMI >=30 in 2016.
- 15.2/1,000 Mercer County residents who used a hospital service in Mercer County had a diagnosis of obesity compared to 14.1/1,000 New Jersey residents.
  - ➢ Obesity rates were found to be amongst the highest in Trenton zip code 08608 (23.1/1,000) and Ewing (23.3/1,000).
- Between 2014-2016 the percent of Mercer County residents reporting no leisure time activity trended upwards from 19.5% in 2014 to 29.1% in 2016.
- More than 40% of all survey respondents claimed to have hypertension, high cholesterol or a weight problem.
- Obesity was the number one concern among survey respondents from Mercer.
- 44% of Mercer County service area residents indicating obesity said they were under a physician's care for the issue, while 32% were monitoring it on their own.

Healthy weight programs are available in Mercer County in both inpatient and outpatient clinic settings and include Bariatrics wellness programs, the RWJUH Bariatric surgery program offering both surgical and non-surgical weight. A bariatric surgery and medically supervised weight loss program is also available at Capital Health at the Capital Health Metabolic and Weight Loss Center. St. Francis Medical Center in Trenton also offers Bariatric surgery with a multi-disciplinary approach to the care of patients.

Interfaith caregivers of Mercer County offer a free 24-week session for seniors at risk of osteoporosis to teach the benefits of exercise, nutrition and safety, drug therapy and lifestyle factors. The program was developed by New Jersey Department of Health and the North Jersey Regional Arthritis Center. The Mercer County nutrition project for older adults offers meals in settings that bring seniors together for activities and social interaction. Lunch is provided Monday-Friday at 12 sites throughout the County. The program also arranges services including nutrition education/nutrition counseling and other health, educational and recreational programs. The nutrition project for older adults also participates in the senior Farmer's Market program, which was developed to provide low income seniors with checks they can use to purchase fresh produce grown by New Jersey farmers.

In 2015, the Hamilton YMCA launched a series of healthy living programs in an effort to combat a variety of chronic diseases. Three programs, ACT Youth Weight Management and Healthy Ways Adult Weight Management and YMCA Diabetes Prevention Program are closely related to this year's goal of assisting Mercer County residents achieve and maintain a healthy weight and lifestyle throughout their lives. Mercer Street Friends Food Bank leads the community response to hunger in Mercer County, channeling 2.7 million pounds of food and groceries to a network of 80 local food partners, shelters, soup kitchens, meal sites, schools, senior and disabled programs and low-income housing sites.

In addition to the prioritized needs discussed above, this CHA identifies the following as additional health needs for the communities:

- Mental health and substance abuse;
- Chronic disease;
- Access to care/transportation;
- Coordination and communication;
- Cancer;
- Cardiovascular disease/stroke;
- Diabetes;
- Underserved populations/healthy equity;
- Chronic respiratory diseases and asthma;
- Chronic diabetes;
- Hypertension;
- Food security;
- Safe recreational spaces; and
- Health concerns related to aging.

2. METHODOLOGY/SERVICE AREA

A. METHODOLOGY

GMPHP developed an evidenced-based process to determine the health needs of Mercer County residents. CHA data sources include both primary and secondary data to provide qualitative and quantitative information about the communities. Data from these sources were reviewed the GMPHP membership to identify and prioritize the top issues facing residents in the service area (see Top Health Issues section).

The flow chart below identifies the CHA and CHIP process employed.
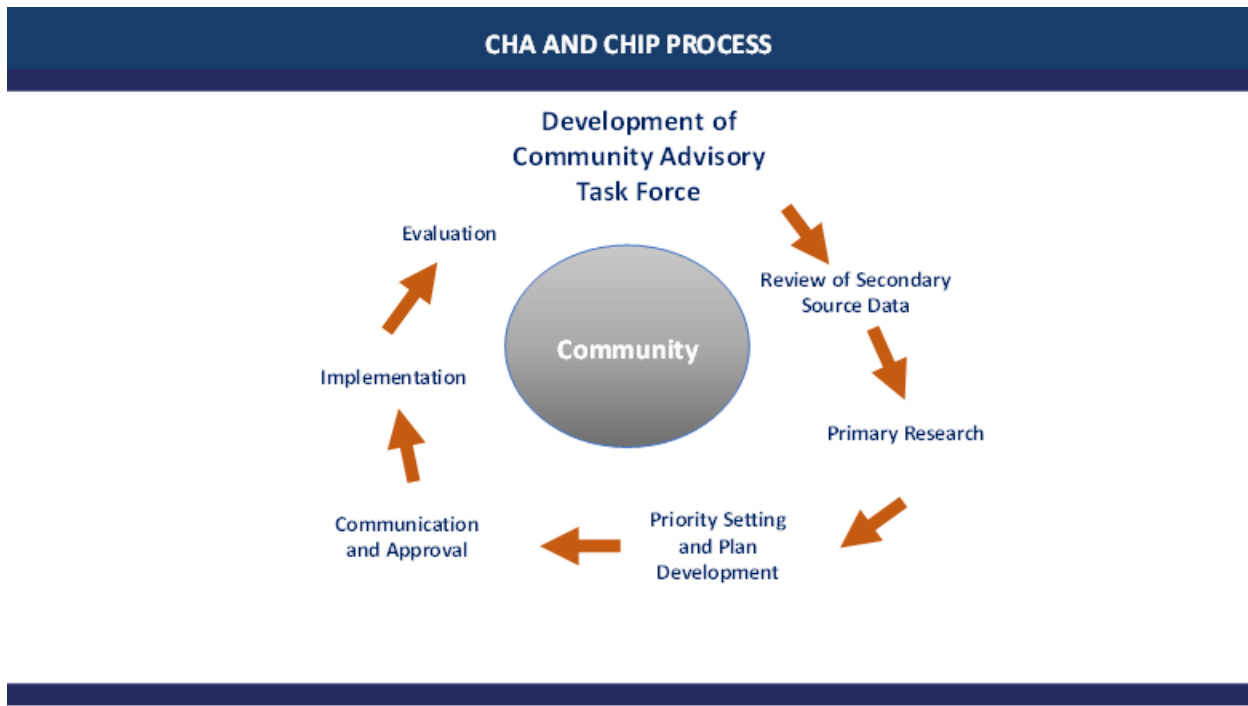

Prioritization Process

Following GMPHP's review of quantitative and qualitative data on August 6th, a list of 12 issues were identified by consultants as common themes of the research. Through discussion, this list was expanded to 15. These issues became the suggested priority issues and included:

- Mental Health and Substance Abuse
- Chronic Disease
- Overweight and Obesity, Nutrition
- Health Concerns Related to Aging
- Chronic Respiratory Diseases and Asthma
- Coordination and Communication
- Access to Care/Transportation
- Cardiovascular Disease/Stroke
- Underserved Populations/Health Equity

- Diabetes
- Hypertension
- Maternal Child Health
- Cancer
- Food Security
- Safe Recreational Spaces

A ballot was developed, and a survey sent on August 14, 2018 to the GMPHP membership asking them to rank each issue based on the following criteria.

- Number of people impacted
- Risk of mortality and morbidity associated with the problem
- Impact of the problem on vulnerable populations
- Meaningful progress can be made within a three-year timeframe
- Community's capability and competency to impact

A tally of the 48 ballots cast resulted in the following five issues to be ranked highest overall.

- Underserved Populations
- Mental Health and Substance Abuse
- Food Security
- Chronic Diseases
- Access to Transportation

Rankings were also developed and weighted for each prioritization criterion.

On September 5th, members of the GMPHP Board met to discuss and determine the priority/priorities it would undertake for the next three years. The Board reviewed the top five priority areas and weighted ranking, undertook root cause analysis and reviewed evidence-based programs that met the group's priority goals and agreed that for the next three years the Partnership would work to help Mercer County residents achieve and maintain a healthy weight and lifestyle throughout their lives.

Relationship of the State Improvement Plan (SHIP) to the GMPHP Plan

Healthy New Jersey 2020 (HNJ2020), the State Health Improvement Plan (SHIP) was the result of a multiyear process to obtain input from a diverse group of stakeholders from throughout the State. The SHIP includes over one hundred health improvement objectives. However, the HNJ 2020 leading health indicator have been the focus of the state's effort over the last several years. These indicators include:

- Access to health care
- Improve birth outcomes
- Increase childhood vaccination
- Reduce the burden of heart disease and stoke
- Prevent obesity

These leading health indicators are related to the state's overarching goals of:
1. Achieving high quality, longer lives free of preventable disease disability, injury and premature death.
2. Achieving health equity, eliminate disparities and improve health for all people.
3. Creating social and physical environments that promote good health for all.
4. Promoting quality of life, healthy development and healthy behaviors across all life stages.

Similarly, the overarching goal of the 2018 GMPHP Plan "to help Mercer County residents achieve a healthy weight and lifestyle throughout their lives", is viewed as an underlying issue related to the each of the state's 4 overarching goals. The importance of maintaining a healthy weight is a significant factor in many preventable diseases and disabilities. Eating a healthy diet and getting regular exercise is important to promote quality of life and healthy development, and are behaviors which are important across all stages of life. Creating environments which promote heathy lifestyles and ensure safe spaces for physical and social activities is similarly important for maintaining healthy lifestyles. Lastly ensuring all people have access to good nutritional food to maintain appropriate weight helps to reduce many of the health disparities that exist in our communities.

Three of the 5 leading health indicators for New Jersey have met the targets set forth in the SHIP plan these include: birth outcomes, teen obesity and deaths due to heart disease. Access to primary care, childhood immunization and adult obesity targets are yet to be achieved. GMPHP believes that it's overarching goal to help Mercer County residents achieve a healthy weight and lifestyle through their lives is paramount to reducing adult obesity; that access to care must be viewed broadly, and not just with regard to medical care, but also with regard to access to services that promote a healthy lifestyle. Lastly, GMPHP believes that achieving lifestyle changes that promote healthy behaviors translates to a variety of health behaviors including healthy diet, exercise and health behavioral changes that promote early screening, detection and vaccination against diseases.

Secondary Data Sources

Over 100 secondary data sources were compiled for this CHA. Indicators were compared by county and State, and to benchmarks. Sources include: The United States Census Bureau, Centers for Disease Control and Prevention (CDC), New Jersey Department of Health (NJDOH), and Behavioral Risk Factor Surveillance System (BRFSS). See **Appendix B** for a detailed list of sources.

Appendix C contains a detailed report of cancer incidence and mortality by cancer site for Mercer County for the years 2010-2017.

Health Profile

Section 5 provides a comprehensive presentation of health outcomes as well as the health factors that contribute to the health and well-being of Mercer County residents.

Color Indicator Tables

Throughout the Health Profile Section of this CHA, the color indicator tables compare county level data to *Healthy People 2020* targets, County Health Rankings benchmarks, and New Jersey State data. Data by race/ethnicity are compared to data for all races in the county, unless otherwise indicated. Mercer County was the midpoint value compared to a range 20% higher than the value for New Jersey, *Healthy People*

2020, or County Health Rankings Benchmarks, or 20% lower than the value for New Jersey, *Healthy People 2020*, or County Health Rankings Benchmarks. If the county value was within the range 20% lower or 20% higher than the comparison indicator, or considered within reasonable range, the indicator will be yellow. The table will be red if the Mercer County value is more than 20% worse or lower than the indicator value. If the Mercer County value is 20% better or higher than the indicator value, the table will be green.

Primary Data Sources

Community Health Needs Surveys

On-line survey Interviews were conducted among 1,701 residents of the Greater Mercer County. Interviews were conducted online and by telephone. A link to the online survey was displayed on hospital web pages and social media sites. Additionally, postcards were handed out at area businesses and libraries, directing residents to the online survey link. A telephone augment was conducted to capture additional interviews in specific areas and among specific ethnic groups. For the telephone portion, a representative sample of households was generated from a database of residential telephone numbers. Bruno and Ridgway Research Associates, Inc. administered the on-line and telephone surveys from April 2 to June 18, 2018. Survey results are incorporated into this CHA. (See Section 3)

Focus Group Discussions

Five focus groups were undertaken to uncover additional information from key community groups and individuals with respect to health needs, challenges and barriers, and suggestions for improving access to health care services. Focus groups were located in each of the five major geographic areas. (See Section 4.)

World Café Meeting

The World Café meeting was held on April 25, 2018, and brought together community representatives to discuss four issues including:

1. What Does a Healthy Community Look Life?
2. *What Do You View as a Barrier to Good Health in Mercer County?*
3. Whose Voice Do We Still Need to Hear?
4. Which parts are most relevant to our community health assessment?

The World Café Report is found **Appendix D**. (See Section 4.)

Assets and Gaps

Section 6, Assets and Gaps, summarizes the preceding components of the CHA. Assets highlight county information indicating improvement over time, in comparison to other counties and the State, or in comparison to other races or genders. Gaps focus on disparities in Mercer County or the RWJUH Mercer service area that have a negative trend, in comparison to other counties in the State or to other races or genders.

Resource Inventory

A service area-specific resource inventory is included as **Appendix E,** which details health and social service resources available to residents in Mercer County. Providers' names, addresses, and phone numbers and type of services provided are contained in the inventory.

B.   SERVICE AREA

The CHA focuses primarily on the health needs of Mercer County residents. Much of the data are provided at the county level, but where available city or zip code level data are provided to enhance understanding of specific regions or populations. The county consists of the following zip codes:

Mercer County

08520	Hightstown
08525	Hopewell
08534	Pennington
08540	Princeton
08541	Princeton
08542	Princeton
08543	Princeton
08544	Princeton
08550	Princeton Junction
08560	Titusville
08561	Windsor
08601	Trenton
08602	Trenton
08603	Trenton
08604	Trenton
08605	Trenton
08606	Trenton
08607	Trenton
08608	Trenton
08609	Trenton/Hamilton
08610	Hamilton
08611	Hamilton
08618	Ewing
08619	Mercerville
08620	Hamilton
08625	Trenton
08628	Ewing
08629	Hamilton
08638	Ewing
08646	Trenton
08648	Lawrence Township
08650	Hamilton
08690	Hamilton
08691	Robbinsville

3.   *MERCER COUNTY COMMUNITY HEALTH NEEDS SURVEY*

Research Objective

The primary objective of this research was to obtain opinions of residents within Mercer County in order to meet government CHA requirements. Areas of focus included:

- Health issues and concerns that impact the community;
- Barriers to accessing health care;
- Strengths and weaknesses of community services offered;
- Personal health attitudes, conditions and behaviors.

Methodology

Survey interviews were conducted among residents of Mercer County. Interviews were conducted on-line and by telephone. A link to the on-line survey was displayed on hospital web pages and social media sites. Additionally, postcards were handed out at area businesses and libraries, directing residents to the on-line survey link. A telephone augment was conducted to capture additional interviews in specific areas and among specific ethnic groups. For the telephone portion, a representative sample of households was generated from a database of residential telephone numbers. The interview averaged 15-20 minutes in length and was conducted April 27-June 18, 2018.

Sample Composition Highlights

A total of 1,701 interviews were conducted in Mercer County among adults aged 21+. These interviews broke down among gender, age and ethnicity as follows: 1,219 (72%) Females, 377 (22%) Males; 689 (41%) 21-49 years of age, 454 (27%) 50-64 years of age, 489 (29%) 65+ years of age; 925 (54%) Caucasian, 270 (16%) African-American, 170 (10%) Hispanic, 218 (13%) Asian.[4]

A.   *MERCER COUNTY RESIDENT SURVEY SUMMARY*

This Community Health Assessment survey generated learnings and insights that can be used to effectively serve the health care needs of the community.

- **Obesity is the #1 health concern of area residents. High levels of concern were also cited for chronic illnesses such as diabetes, cancer and heart disease.**
  - ➢ Obesity is a leading contributor to chronic illnesses and a major cause of death in the U.S. More than one-half of respondents claim to have high blood pressure, high cholesterol and/or a weight problem.
  - ➢ Increasing outreach and developing educational programs that address nutrition and wellness, with focus on preventative lifestyle behaviors, could improve the health and overall well-being of area residents.
  - ➢ Healthy eating and exercise programs in schools could aid in lowering childhood obesity and the risks associated with chronic conditions.

---

[4] Not shown are "other" mentions and "no answer".

- **Additionally, high levels of concern were cited regarding mental health, substance use/abuse, health concerns related to aging and high stress lifestyles.**
  - ➢ The rising opioid epidemic and increased concern about mental health issues present opportunities to increase education to both community residents and to health care professionals in an effort to help reduce the growing trend of opioid/Rx drug abuse and the stigma associated with mental health.

- **Regardless of age, income level or ethnicity, the key barriers to seeking medical care are insurance issues and related cost concerns.**
  - ➢ Addressing the economic challenges associated with access to care, including insurance issues, will serve to improve access and affordability of care to a greater proportion of the community.

- **The Greater Mercer County is regarded highly by most residents, with many positive services offered to the community. However, specific needs for improvement are cited in the areas of transportation services, healthy food choices in schools, safe/affordable housing and interpersonal violence.**
  - ➢ Since access to services can be challenging for some, expanding transportation services, particularly for seniors and persons with disabilities, can improve access to care for these population groups.

- **Greater Mercer County residents describe their overall health as being good/very good and exhibit many positive health-related behaviors (healthy eating, physical activity, annual physicals and recommended screening tests).** They report their children eat breakfast daily and are physically active. However, a substantial portion of residents (Hispanics, lower income, older residents) do not eat healthy, lead a sedentary lifestyle, do not get recommended screening tests and/or suffer chronic medical conditions.
  - ➢ Diagnostic screenings are crucial in the early detection, treatment and management of chronic diseases. The availability of these preventative services should be expanded to ensure they are reaching and serving minority and lower income populations in a cost-efficient manner.

In summary, survey data suggest that wellness initiatives, programs and services addressing the availability, accessibility and affordability of care would meet a significant portion of the communities' needs.

COMMUNITY STRENGTHS AND WEAKNESSES

Area Strengths

- A large majority of residents surveyed feel their community is a good place to raise a family, with safe places to walk/play, ease of finding fresh food and ample places to socialize.
- On the other hand, the community receives relatively low scores in the areas of interpersonal violence, safe, affordable housing, healthy food offerings at schools and transportation services to assist residents.

Community Strengths ➡️

Easy to Find Fresh Fruits/Veggies 73%	Safe Outdoor Places to Walk/Play 71%	Good Place to Raise a Family 69%	Places to Socialize 67%
Easy to Live a Healthy Lifestyle 61%		Low Level of Violence 59%	
Educational Opportunities 49%	Affordable Basic Needs 44%	Transportation Disabled/Seniors 37%	Job Opportunities 36%
Low Interpersonal Violence 34%	Schools Offer Healthy Food Choices 31%	Transportation Services to Assist Residents 29%	Ample/Safe Affordable Housing 28%

Q.5 - Using the scale below, please indicate how much you agree or disagree with the following statements about your community.

b | **bruno** and **ridgway**

Summary of Community Strengths by Subgroups

- Overall, Caucasians tend to rate community services high, while African Am. rate community services low versus other ethnic groups.
- Additionally, those in higher income brackets are more positive to their community services versus those in lower income brackets and males are overall more positive than females.

Easy to Find Fresh Fruits/Veggies
- Caucasian/Hispanic
- Higher income ($100K+)

Safe Outdoor Places to Walk/Play
- Caucasian/Asian
- Older (50+)
- Higher income ($100K+)
- *Least among African Am.*

Good Place to Raise a Family
- Caucasian
- Older (50+)
- Higher income ($100K+)
- *Least among African Am.*

Places to Socialize
- Caucasian
- Older (50+)
- Higher income ($100K+)

Easy to Live a Healthy Lifestyle
- Caucasian/Asian
- Higher income ($50K+)
- Older (50+)

Low Level of Violence
- Higher income ($50K+)
- Male
- Older (50+)
- *Least among African Am.*

Educational Opportunities
- Caucasian
- Higher income ($100K+)
- Male
- Mid age (50-64)

Affordable Basic Needs
- Male
- Highest income ($150K+)
- *Least among African Am.*

Transportation Services for Disabled/Seniors
- Lower Income (<$50K)
- Older (50+)
- *Least among Asian*

Job Opportunities
- Younger (<65)
- Higher income ($100K+)
- *Least among Asian*

Low Interpersonal Violence
- Male
- Older (65+)
- Asian

Schools Offer Healthy Food Choices
- Younger (<65)
- *Least among Asian*

Transportation Services to Assist Residents
- Older (65+)
- Male
- African Am.
- Lowest income (<$25K)
- *Least among Asian*

Ample/Safe Affordable Housing
- Male

Parenting Classes	11%[CE]	10%[A]	4%[AB]	8%[AB]	4%
Mental Health Counseling	24%	22%[A]	20%[AB]	23%[AB]	19%
Alcohol/Drug Counseling	13%[BCDE]	6%[A]	4%[AB]	3%[AB]	2%
Stop Smoking Program	7%[CDE]	6%[A]	4%[AB]	2%[AB]	1%

Alcohol/ drug counseling is more common among poverty level residents

Highest incomes have more screening tests

Q.7 - Please indicate if you have had, or participated in, the services that are listed below in the past 2 years.
(A/B/C/D/E) = Significantly greater than indicated cell at the 90% confidence level.

bruno and ridgway

Conditions Diagnosed by Physician (Self or Family Member)

- Older residents (65+) report being diagnosed with more conditions versus their younger counterparts, although depression/anxiety, smoking addiction and substance abuse skew towards the younger population.
- Males report somewhat higher incidence of heart disease and diabetes, while females report more weight issues, depression/anxiety and asthma.

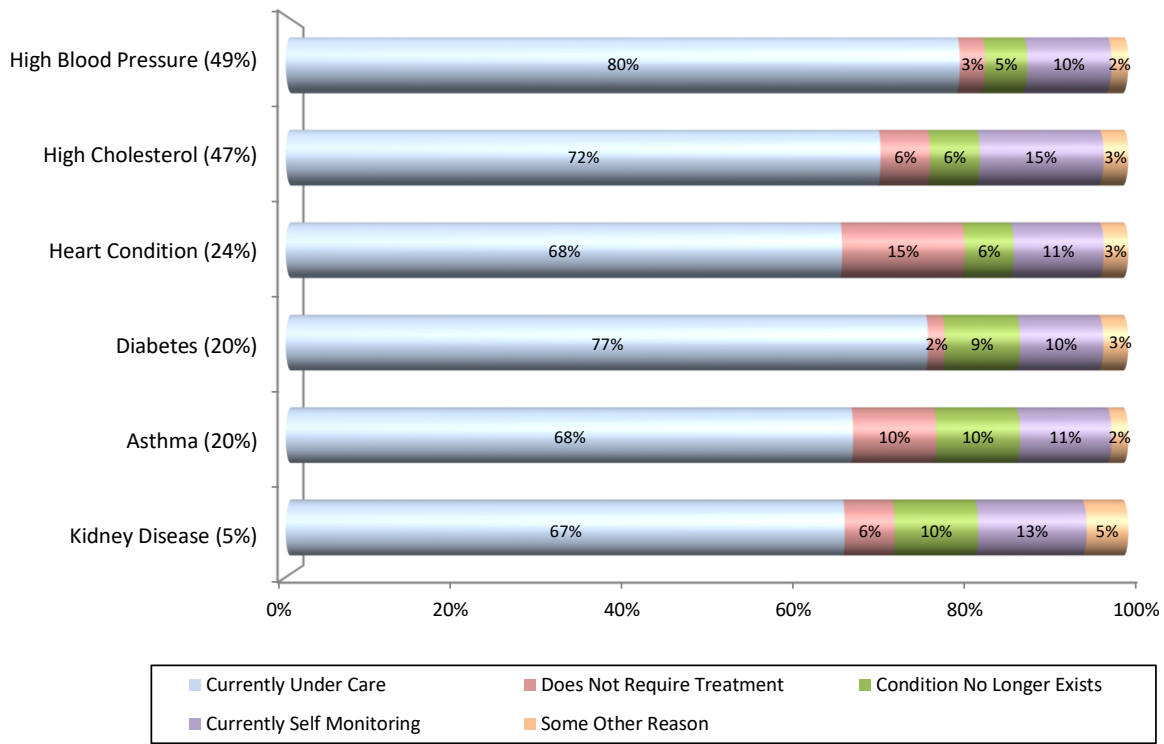

(N=1701)
Q.8 - Have you, or a household family member, ever been told by a doctor or other health professional that you have had any of the following?

bruno
and ridgway

How Conditions Are Being Managed

- The large majority of those reporting high blood pressure, diabetes, high cholesterol, heart conditions, asthma and kidney disease are currently under care for their conditions, with some reporting the condition no longer exists, does not require treatment or is currently being monitored on their own.

Condition	Currently Under Care	Does Not Require Treatment	Condition No Longer Exists	Currently Self Monitoring	Some Other Reason
High Blood Pressure (49%)	80%	3%	5%	10%	2%
High Cholesterol (47%)	72%	6%	6%	15%	3%
Heart Condition (24%)	68%	15%	6%	11%	3%
Diabetes (20%)	77%	2%	9%	10%	3%
Asthma (20%)	68%	10%	10%	11%	2%
Kidney Disease (5%)	67%	6%	10%	13%	5%

Legend:
- ■ Currently Under Care
- ■ Does Not Require Treatment
- ■ Condition No Longer Exists
- ■ Currently Self Monitoring
- ■ Some Other Reason

NOTE: Multiple mentions.

Those who agree with these statements tend to be:
lower income, younger (<50), African Am. or Hispanic.

(N=1701)

Q.12 - Please read the following statements that people have made about their food situation.
For each one, indicate how true the statement was for your household over the last 12 months.

bruno and **ridgway**

Physician Habits

- Older and higher income residents are significantly more likely versus their younger/lower income counterparts to visit the same doctor or group every year or two for a check-up, while the younger and lower income residents are more likely to visit the doctor only when sick or need medical care.
- Hispanics and Asians tend to visit the doctor only when sick or urgent care is needed.

	Total	Age			Income					Ethnicity			
		21-49 (A)	50-64 (B)	65+ (C)	<25 (A)	25-50 (B)	50-100 (C)	100-150 (D)	150+ (E)	Caucasian (A)	AA (B)	Hispanic (C)	Asian (D)

<$25K	47%
Asian	49%
(N=1701)

Q.14 - If you were able to access medical care virtually, for example, through FaceTime or Skype, how likely would you be to use this type of technology?

bruno and ridgway

Sampling of Additional Comments - (Reference Data File for Complete List)

"A free or low cost active older adult exercise program available on a daily basis."

"Bilingual counseling services."

"Something needs to be done about our water. Trenton Water Works is continually failing this community."

"Outreach in my own community would be welcome. For example, screenings and information sessions about nutrition or weight loss would be useful."

"Not able to get transportation to an exercise facility."

"There needs to be more LGBT resources in the community, besides PFLAG in Princeton."

"Support groups for people who have addictions, eating disorders, etc."

"My children are eligible for free meals in school but they do not like them, so they come home and eat after school, which does not help our financial situation at all."

"Insurance needs to cover prevention better and needs to be easier to obtain and pay for."

"Clean water and clean air."

"Health care for middle income residents is a joke! The average family of 4 has to pay out $20,000 per year in medical before they reap the benefit of insurance…".

"I am very concerned about the lack of education around family planning in this community…."

"Cost prohibitive and lack of providers with evening hours in area. Access to mental health providers is lacking Also, eliminate the stigma associated with treatment so people willingly seek treatment."

"I think that loneliness and social connection outweigh any other health issue currently facing adults in my age bracket (40-50) because it's difficult to make friends in adulthood and because it's difficult to find time for friendship while working, raising children and helping aging parents."

Q.15 - Use the space below to expand on a topic previously mentioned or an important health-related topic that was not mentioned in this survey.

bruno and ridgway

4. FOCUS GROUP DISCUSSIONS AND WORLD CAFÉ MEETING

A. FOCUS GROUPS

Five focus groups were held with 55 participants across five Mercer County geographic areas:

- Hamilton/Robbinsville
- Pennington/Hopewell Borough and Township
- East and West Windsor/Hightstown
- City of Trenton
- Lawrenceville/Ewing/Princeton

Participants were community leaders/representative of the following organizations, government, health and wellness, chronic disease, behavioral health, non-profits, education, faith-based, business/employers, public safety, veterans, and transportation.

Areas discussed included service needs and challenges, resource availability, family and patient support; stigma; challenges and barriers; underserved consumers; and integrated care.

Overall Findings

Each community noted improvements over the past few years.

Better service and/or overall increase in services in the areas identified below were most commonly mentioned.

Area	Definite Improvements		'Some' Improvement
Hamilton/Robbinsville	• Clinics for uninsured families • Support for those disabled • Veterans programs	• Childhood obesity • Senior services availability	• Opioid addiction
Pennington/Hopewell	• Hospital access • Anti-smoking campaign	• Parental support in various areas – medical and emotional	• Information flow • Broader drug/alcohol reach • Mental health support
Windsor/Hightstown	• Senior transportation • Wkly BP screening • Improved coordination with police • Closer hospital and EMT closer to police	• New leadership • Lock boxes for elderly • Politicians more in touch with community	• Vision/hearing screener availability
City of Trenton	• Employment improved • Young adults doing more in community • More small businesses opening	• Food pantry availability • Heightened community activism/collaboration	n/a
Lawrenceville/Ewing/ Princeton	• Improved partnership with law enforcement • General outreach improved • Health services for undocumented population	• Hospitals engaging more • Availability of more physical space • Heightened health focus	n/a

Each community had a few notable differences, with Trenton identifying the greatest number of concerns:

- Hamilton/Robbinsville: Hunger/Food insecurity
- Pennington/Hopewell: Loss of Planned Parenthood
- East/West Windsor/Hightstown: Immigrant population, hospital emergency room wait times (no specific hospital identified)

- Lawrenceville/Ewing/Princeton: Access to healthy food in Ewing
- City of Trenton: hunger/food insecurity; maternal/pediatric services; employment; emergency medical service; teen pregnancy; homelessness/poverty; violence/racism; infant mortality; sexually transmitted disease; lead poisoning.

While discussing community improvement, there was a singular commonly voiced theme regarding coordination/communication. All groups mentioned the need for better coordination/communication across the various volunteer/governmental service organizations.

- *"There's no coordination of services and I don't know exactly where to point/send people. As a result, services go underutilized."*
- *"Communities and senior centers need to work together – there's no oversight."*
- *"Currently we are in silo's that don't communicate."*
- *"We need a central communication port, connecting all of the services together."*
- *"We have so much need in this area, and often volunteers don't know what is available or how to connect people to what they know is available."*

Although occasional improvements were noted, respondents characterized access to care as "not good" or "in need of improvement"; this was true across all groups. Access was often intertwined with lack of a broader communication network.

There were eight common concerns/needs that were consistently mentioned across the five groups.

- Community/network connectedness/communication
- Access to care
- Mental health: opioid addiction, stress/anxiety management, suicide prevention
- Transportation barriers
- Language barriers/immigrant populations
- Senior adult needs - veterans' services in some areas
- Education: health, parenting, social media, tutoring programs, bullying
- Medical conditions: Alzheimer's/dementia, asthma, cancer, cardiovascular disease, hypertension, childhood obesity, chronic pain.

When asked to prioritize their common areas, similarities and differences among communities were noted. Common to all geographies were five main needs:

- Coordination and communication of information/services between agencies
- Access to care as broadly defined
- Greater focus on mental health issues and health education in general
- Senior Services
- Transportation

Priority areas that differed by community included:

- Hopewell/Robbinsville: Preventative medical conditions, parenting classes
- Pennington/Hopewell: Elderly, Safe drinking water
- Windsor/Hightstown: Domestic violence, veterans' services

- Trenton: Institutional racism, employment, gang violence, chronic poverty, nighttime safety, nutrition, emergency services, employment/lack of opportunity
- Lawrence/Ewing/Princeton: Access to nutritional food, access for low income/no insurance, affordable housing, sexually transmitted disease, parent education, chronic disease focus (cancer, Alzheimer's)

The following describes specific discussions at each of the five locations.

Hamilton/Robbinsville

Areas of Improvement

Regardless of some perceived improvement, most indicated there was still more to be done in each of the areas identified.

- Opioid awareness
- More programs initiated at the hospital at the time of intervention
- More clinics available for uninsured families to receive healthcare
- Narcan availability and opioid training now in high school at Hamilton
- Clinics for wellness visits, unvaccinated children who are uninsured, STD's in adults (Hamilton)
- Many families with special needs (mental emotional) – ability tree now in Robbinsville
  - ➢ Helps families with a variety of issues for those with disabilities (eq. transfer from school to adult life etc.)
- Various veteran programs via Office of Veteran Affairs (e.g., resource room for vets, vet mentors, etc.)

In other areas, some improvements were noted. Also identified was an increased demand, which made it hard to keep up with needs.

- More aging senior services are available than previously.
- Increased demand for mental health services for aging seniors.
- While many services were available it was very hard to know who provided, what was provided and where services were located.
- Strong need for communication among all services and lack of appropriate networking between providers.

Access Needs

- Insurance
- Linkage to appropriate care
  - ➢ Access to physicians
  - ➢ Hospital access
  - ➢ Affordable medical services
  - ➢ Access to medication
- Affordable housing
- Transportation needs
- Over population causes lack of resources (e.g. vaccines, well care)

Overall access to care was seen as the single, key factor in maintaining community health.

Greatest Health Concerns

1. Mental health
    - Opioid addiction (resources in the community)
        - Viewed as a family disease that needs to involve educators, spiritual leaders and prosecutors
    - Lack of insurance
    - Lack of rehab space for time sensitive conditions
    - Loved ones who are not supportive
    - No recovery housing
    - Increased crime
    - Marijuana use (Robbinsville)
    - Difficult to sustain sobriety in the addiction community
    - Stressful culture
        - How to manage the environment: life culture pressure: over-scheduled kids, adults, home life, finances, college, etc.
        - Generalized anxiety
    - Suicide prevention
    - Breakdown of the family unit
        - Leads to anxiety and substance abuse
    - Counseling availability for emotional issues
    - Social media/bully concerns
2. Seniors
    - Education
    - Transportation for elderly and disabled growing – have wanted lists; vets also have transportation needs.
        - "much space taken up for dialysis patients, don't leave much room for senior transport".
        - "Many are frightened to drive – others can't drive"
        - "Need for 'senior friendly Uber'"
    - Medication compliance and education
    - Connections between support system and compliance.
    - Affordability of care
    - Concerns on: those still driving
3. Education (Health and Wellness)
    - How to live with health concerns/conditions
        - Educating people about eating and living health
    - Special needs populations (autistic training)
    - Diabetic care education
    - Limited access for some populations
    - Nutrition education and understanding
4. Food Insecurity
    - Children and adults
        - "1 in 5 kids are food deprived."
    - Lack of healthy food requires education to eat healthy
        - "It's easier to go with fast food or corner bodegas."

5. General Increase in Violence
  - Dating violence
  - Gun violence (in parts of Hamilton)
  - Domestic violence
  - Impact on students
  - Support of those abused
6. Language Barriers
  - Limited English proficiency/education (residents from Haiti, Ghana, Mexico)
  - Decrease in ESL enrollment – 33%
    - "no one wants to come forward given the potential environment today, ESL enrollment is a way down due to the federal crackdown via ICE."
7. Veterans
  - Need more attention: WWII and Vietnam veterans all different (PTSD)
  - Not enough services locally
8. Parenting Classes
  - Focusing on: coping skills, entitlement, helicoptering, addressing the desire for instant gratification/quick fix.
9. Therapy Dogs for PTSD, seizures and dementia
10. Pedestrian and bike safety
11. Medication compliance
12. Physician specialists lacking Endocrinologists, dermatologists, and rheumatologists

Medical Concerns and Problems

  - Alcoholism – increase in the number of persons found passed out
  - Alzheimer's
    - Money and care awareness
    - Stress for caregivers
  - Cancer
  - Childhood obesity
  - Chronic pain management
  - Dementia
    - Aging problems
    - 70% of residents in facility have some form of dementia.
    - Lack of nurses to spend time with patients in once/month
  - Diabetes: diabetic care follow-up
  - Hep C increases
  - STD's in young teens

Areas Prioritized for Attention

Overall the county itself is overgrown and the current infrastructure falls short in meeting all needs.

  - Coordination of information and services across communities
  - Diabetic care

- Access to care specifically focused on:
  - Hospitals and doctors – particularly specialists (e.g. Endocrinologists)
  - Coordinated information
  - Knowledge of available resources
  - Insurance coverage
- Mental health – specifically opioid addiction and stress management
- Opioid addiction
  - "We need to do more/deal with it now; focus on prevention and diminishing over-prescribing of drugs; need to have something like linkage to care."
  - "It's an epidemic – We are trying to educate schools, spiritual leaders, etc. We are frustrated because there are no beds immediately available for the uninsured…not enough beds available – We are constantly begging for non-project groups for help…It becomes a family disease."
- More community focus on certain prevalent medical conditions that are underserved: diabetes, cancer, childhood obesity and alcoholism (prevention, management, and treatment)
- Parenting classes that focus on the concerns identified.

Pennington, Hopewell Borough, Hopewell Township

Areas of Improvement
- Hospital access
- Support for parents of children (medical and emotional)
- Anti-smoking efforts

Areas in Need of Further Improvement
- Flow of information
- Broader reach with drugs and alcohol
- Mental health

Access Needs
- Grant applications
    "We can only have better access to care if we receive more money than we get from grant applications and right now the money is running out."
- Insurance needs
- Transportation
  - Lack of cabs
  - Transport for those living alone that goes beyond Meals on Wheels
  - Access, so the elderly are able to function independently
  - Better, faster identification and support of people in need

Greatest Health Concerns
1. Mental health
   - Stress/Pressure
     - Especially those going to college
     - Parental education about stress

- Reduction of stigma associated with mental health
- Lack of resources for mental health issues
- Suicide/Cutting

2. Connectedness of Community
   - Communication needs to improve
   - Review/address community financial resources
   - Cultural competence
     - ➢ Providers/Organizations need to more effectively deliver health care services that meet the social, cultural and linguistic needs of patients.
3. Drug use was viewed as increased. Some believed use was increasing because the stigma associated with drug use was down.
   - Opioid addiction
     - ➢ Narcan in schools and uncertain if that is good or bad
   - Heroin, vaping more common
   - Lack of insurance to cover treatment
   - Schools taking a therapeutic approach
   - Random drug testing in some places

4. Loss of Planned Parenthood viewed as critical.

Additional Concerns

5. Seniors
   - Need better information on community resources
   - Focus on senior falls
   - Transportation (seniors and disabled)
   - Housing

6. Poverty in certain areas needs to be addressed.

7. Housing
   - Need for more affordable housing
   - Project Freedom, of some help, but more is needed.

8. Immigration Integration
   - Other vulnerable populations

9. Education
   - Need for tutoring programs
   - Violence and Bullying
   - Gender and Fluidity training

Medical Conditions and Problems

- Hypertension
- Sexually transmitted diseases
- Under-age drinking
- Concussions
- Nutrition
- Alcoholism
- Sleep Disturbances

Four Areas Prioritized for Immediate Attention

1. Communication needs to improve from the municipality/community perspective
   - Need to encompass and focus on:
     - ➢ Better community health
     - ➢ School districts
     - ➢ Social media

2. Elderly Population
   - Identification of resources and adequate care for elderly

3. Education and Tutoring
   - Tutoring programs
   - Violence/Bullying
   - Sexual consent
   - Gender and sexual fluidity

4. Ensuring Safe Drinking Water
   - Older system – need to evaluate water access as well as water lead levels

East Windsor, West Windsor, Hightstown

Areas of Improvement

- Availability of RISE (a community service partnership)
- Senior transportation has improved
- Availability of weekly blood pressure screenings
- Penn Medical providing closer hospital services
- 24 hr. EMT now near the police station
- Politicians more in tune with community needs
- Blue Angel lock box for elderly
- Congregation works with police chief re: drugs/Rx drugs
- New leadership and health screening
- Greater trust in/use of social media
- Vision and hearing screening availability – in progress

<u>Access Needs</u>

- Participants viewed access as hindered because of a lack of a broader communication network that would aid connections and collaborations.
  - ➢ General concept of volunteers, chairperson and Network not always apparent.
  - ➢ Government involvement was thought necessary.
      > "There is a sense of provincialism – we're all trying to
      > solve the same problems."
- Access to care was considered problematic in terms of both services and specific populations.
  - ➢ Reaching appropriate doctors
  - ➢ Training
  - ➢ Lack of cancer screening
  - ➢ Medicaid cutbacks
  - ➢ Adult/Senior care
  - ➢ Uninsured populations
  - ➢ Undocumented populations
  - ➢ Language barriers (need more bi-lingual support)
  - ➢ Health programs

<u>Areas of Need</u>

- Mental health
  - ➢ Substance abuse
  - ➢ Domestic violence
  - ➢ Any crisis
  - ➢ Stress (school-aged children)
  - ➢ Psychological barriers
  - ➢ Differences between East and West Windsor
- Adult population needs
  - ➢ Uninsured adults
  - ➢ Homelessness
  - ➢ Access to doctors
  - ➢ Domestic violence
- Schools – schools should be safe haven
  - ➢ Suicide concern – middle or high school
  - ➢ Loneliness of students
  - ➢ Stress over academics
  - ➢ Backpack Food Program – not utilized in middle school – children thought to be embarrassed
  - ➢ Bullying
- Immigrant concerns – ICE
  - ➢ Undocumented – trickle down problems
  - ➢ Language barriers
  - ➢ Need for clothing and food
  - ➢ Availability of non-English tutors
  - ➢ Summer programs for children

In assuming needs in these communities, a few commented that there were no measurable results for any of the initiatives put into place.

Other Needs

- Drug abuse
  - Prescription drug use
  - HIV/AIDS
    - Hyacinth Foundation helpful
  - Marijuana (edible and liquid)
- Emergency Room of hospital
  - Basically, a holding pen
- RISE – Tremendous service group
  - Always looking for more volunteers
- Sexual orientation
  - LGBTQ numbers are less – but still a problem
  - Better public transportation
- 24/7 mobile response needed
- Lack of Veterans' services

Medical Conditions of Concern

- Alcoholism
- Asthma
- Cardiovascular problems
- Dental health
- HIV
- Obesity
- Pregnancy
- Sexually transmitted diseases

The need for community networks and adequate communication between those networks was consistent in both Windsor/Hightstown.

Areas Prioritized for Attention

- Mental health
- Stress relief for students, parents and teachers
  - Teachers specifically noted feeling the stress of school shootings
- Medical transport
  - Cardiac issues and falls
- Domestic violence
  - Related to alcoholism
  - Recurring stress

- Translators needed
  - No translators available; currently young children are translators for parents
- Transportation issues
- Veterans' Services
  - No VA hospital/clinics

City of Trenton

Focus group members felt there had been a "climate change" for the better over the past two years (hope for change with new leadership but not enough accomplished).

Also noted was a desire to do more, especially among young adults who want to effect change and contribute back to the community.

Positive changes were noted, *"more small business and restaurants showing up (i.e., Starbucks), leading to more hiring of locals and workers around the community"* and more outreach from existing institutions.

It was noted *that "even with all the budget cuts at the libraries, they are doing many free programs for people. Social workers come in to help the homeless, mentor programs, partnering with other groups."* All were seen as positive moves.

Additional positive changes noted were:

- More community awareness – better collaboration among groups
  - More people coming together
- Food Pantry
  - Demand greater but amount and quality of food better
  - Improved leadership communication with suppliers
- Trentonians are better served because of heightened community awareness, activism and better collaboration
- Employment is a bit better

Access was considered a HUGE issue in Trenton, particularly as related to medical care.

- Medical Care
  - Erosion – maternal/child care is missing issue, maternity departments closed left and right, and the nearest is very far
    > "Through grants they are improving access to care, free pregnancy testing, WIC. Grants allow grassroots knocking on doors to see who needs care, bus tickets allow access to care."
  - No pre-natal care
  - No OB GYNs in Trenton, only 1 free clinic
  - Most OBs do not accept Medicaid
  - Doctor time limitation because of insurance
  - Infant mortality rate of Blacks vs Whites is 3X more
  - Babies are being born addicted to drugs

- ➢ Diminishing nursing care/doctors
- ➢ Lack of Patient Advocates
- Transportation issues – no bus service to Capital Health
  - ➢ Clinic sees 1,400 patients each month. 120 new pregnancies a month – it still takes 3-5 weeks to get an appointment. Pre-natal Clinic has a shuttle to Capital Health.

Additional concerns that fall under the umbrella of access included:

- Health literacy
  - ➢ The need to teach patients how to interact with physicians
  - ➢ The need for better explanation of conditions, medications, lab work, billing to patients by physicians and pharmacists

> *"Very confusing, even if they get it they can't find doctors or can't figure it out, so they end up not using it. The system is not set up to help them – too many barriers. Policies change all the time. Unsure of what is covered, labs, appointments, etc. It's hard enough for professionals to navigate the System, much less the everyday people."*

- Insurance changes
  - ➢ Coverage problems in general and need for broader range of coverage options to support health care choices
  - ➢ Have to teach them what to ask for
- Language barriers

> *"In the communities there are lots of single moms. They don't have coverage, but the kids do. However, there are language barriers for quite a few."*

- Racial barriers
  - ➢ Closure of services
  - ➢ Opioid addiction services but not crack cocaine
  - ➢ Services in general
- Mental health
  - ➢ Trenton Psychiatric Hospital closed

> *"Now there is an influx of mentally ill at libraries since they are a safe haven with a roof. ODs in bathrooms. This is the only place to possibly find access to information about care. Their needs are not being met; the Police Department monitors the library and tries to help with tips on the System, suggest other resources, clinics. However, the libraries worry about their own employees and visitors with the mentally ill."*

  - ➢ Ill-equipped, lacking resources for employees and patients with mental health problems
- Public health services are diminishing or closing

> *"Once you figure it out, things change or there are closures."*

Underlying the areas of concern was the *"negative perception of people who live in Trenton, which creates an internal powerlessness, a living the perception stigma."*

Areas of Concern
- Mental health
    - Anxiety, depression/other psychiatric illnesses
    - Students disempowered/disenfranchised
    - Suicide prevention needed
    - Cyber bullying (fed by Social Media)
- Hunger/Food insecurity
    - Corner stores only – high sodium, poor quality, etc.
        > *"Food stamps have been cut back due to the lack of redemption rates but there is no access to food. There is still a huge need."*
    - Lack of supermarket in the area
    - WIC offering some fresh food
    - No place to redeem vouchers: County cutbacks
    - Lack of access to fresh foods/cost
        - Farmers' Market only open May-October
- Medical issues
    - Maternal and pediatric service concerns
    - Infant prematurity
    - Preventative health care including support for alternative health care approaches (i.e., support for immune system and enhance good health)
- Immigrant population issues (Haitian, Egyptian, Nigerian, Spanish, Polish)
    > *"Is the library safe from ICE? Parents don't even take their own kids to school out of fear. ESL is available but not for disabled groups, ADD, autism, etc. If there has been an ICE issue you see a huge drop within the next days/weeks of immigrants coming in for services."*
- School environment
    - School-to-prison pipeline
    - Narcan in bathroom
    - Need for leadership development

In discussing other areas of concern/need, participants talked about a generalized disappointment because so much is stacked against the City and the County. The issues cited included:

- Poverty: chronic and concentrated
    > *"Outside investors come in and buy buildings, turn them into Section 8 housing. People don't work, don't contribute to the community."*
- Violence
    - Sexual assault and abuse
- Drug use/opioid addiction
    - Racial disparity
    - Mothers addicted
- Homelessness
    - Lack of affordable housing
- Veterans' Services
    - Lack of services for Trenton Vets – have to go to other areas for care

- Racism
  - Apparent in closure of services
- Women
  - Low status of women
  - No Women's professional representative
- Institutional racism
  - Racial disparity
- Seniors: General Elder Care
- Suicide prevention
    "Of 15 kids in a youth group, 4 personally knew someone who committed suicide."
- Sexual assault by adults on young people
  - Family members or those in the community
- Transportation
  - Inefficient public transportation
  - Transportation systems difficult to navigate
- Smoking cessation
- Employment
  - Job readiness/education
- Teen pregnancy
  - Teen pregnancy rates are the same as they were 4 to 5 years ago, approximately one-third of 100 kids under 17
- College graduates
    "They don't come back; were not raising in-house leaders."
- Health education
  - Health literacy
  - How proper food and nutrition can prevent and reverse disease

With few exceptions, similar medical conditions were noted for Trenton that were identified in other communities.
- Asthma in the young
- Cancer
- Depression
- Diabetes
- Heart disease
- HIV
- Infant mortality
- Lead poisoning rampant (leads to misdiagnosis)
- Obesity/childhood obesity
- Pre-natal care
- Sexually transmitted diseases

Trenton participants had the longest list of priority needs compared to the other communications. The list included:
- Mental health
  - Access to services
  - Education on mental health

- Preventative health care
- Substance abuse
- Mental health Patients' Bill of rights
  - Felt to work against families and caregivers
- Health care
  - Access to maternity and pediatric services
  - Health literacy
  - Preventative health care
- Institutionalized racism
  - School-to-prison pipeline
  - Treatment in health care system
- Transportation services
  - Lack of public transportation; need Medicaid for Mercer County T.R.A.D.E.
- Employment
  - Job readiness – high school education
- Outside perceptions of Trenton creates internal powerlessness
- Gang violence
- Chronic poverty
- Nighttime safety
- Nutrition – children and elderly
- Emergency services
- Overall lack of services
- Employment/job readiness

There were several other issues and concerns raised by participants including a lack of leaders from Trenton.

> "Civic association volunteers are residents, but most other leaders are from outside of Trenton."

Also highlighted were safety concerns and a sense that between 5:30-6:00 PM the City shuts down.

> "Even for meetings, people say they can't come out in the dark."

Participants were also concerned about budget cuts impacting mentoring programs and about outsiders (Pipeline) building a City of concentrated poverty.

Lawrence, Ewing and Princeton

Among the improvements noted in the Lawrence, Ewing and Princeton area was a heightened awareness about what is available and what is being done was considered a good change over the past few years. Other improvements included:

- Law Enforcement
  - Improved partnership/relationship
- Undocumented high school population
  - Well Baby does exams to help Moms stay in high school
- Hospitals are engaging more with the community

- Outreach has improved
  - More vans available, allowing greater spread of health information
- Facility Increase
  - Improved/larger physical spaces
  - Greater access to families
- Health focus heightened
  - Health Fairs – block parties
  - Health coaches: diabetic/cardiac – although not enough use of them

Access issues were focused on five areas, with support for mental health most dominant.

- Mental health
  - Adolescent/child psychiatry
  - Sibling relationships
  - 'Telemental' health
- Transportation
  - Provided by private groups – but more publicity is needed to heighten awareness e.g., disability buses
- Access to broader medical care
  - Currently insufficient for low income families
- Insurance issues
- The dental or vision plans for all

Participants saw a greater need for more information in many areas.

- Mental health
  - Depression/anxiety/suicide – middle school, high school and adults
  - Healthy coping skills
  - Prevention program in the high school
  - Anxiety and pressure/stress for trivial matters
  - Generational change Post 911: greater stress, more threatening environment
- Education
  - Behavioral health
  - Alzheimer's
  - Bullying
- Access to healthy food (Ewing)
  - Boxed dinners/garden-to-table
  - Send Hunger Packing, but there is a stigma with that
  - Food Pantry
  - General food insecurity
- Immigrant populations (Asian-Seniors – more well-to-do; Latinos – younger)
  - Undocumented minors and children of undocumented parents
  - No vision/dental – limited to no access to health care
  - Children worry about parents
  - Afraid to go to WIC services – will be denied seen as a 'public burden'.

Other areas in which respondents saw a need for further improvement included:

- Elderly
  - ➢ Nursing home
  - ➢ Home health available, but insurance issues
  - ➢ Ongoing need for support with activities of daily living
  - ➢ Lack of awareness of volunteer services
  - ➢ Degree of media literacy (no computers, smart phones, etc.); lack of ability to communicate with seniors
- Transportation
  - ➢ Always an issue, but more of one outside Trenton
- Communication
  - ➢ Need for a central referral location, perhaps through law enforcement – 'See something, say something'
  - ➢ How do we connect people to services offered?
  - ➢ How do we create neighborhood groups?
  - ➢ Where are community resources?
  - ➢ Ensure other helping organizations know what each is doing in each community

Participants saw a need for improvements in a number of additional areas, including:

- Women
  - ➢ Sexual assault
  - ➢ Domestic violence
- Volunteer Programs
  - ➢ Group shopping
  - ➢ Specific neighborhood groups
- Substance Abuse
  - ➢ Drugs: DARE – Lawrenceville and Corner House – Princeton
- Veterans' Services
  - ➢ Need for more home care connections
- Affordable Housing
  - ➢ Home First – limited and expensive
- Weekend Health Care
  - ➢ ED is the only resource
  - ➢ Need coordinated access to doctors on Saturday and Sunday
- Dental Care
  - ➢ One-third of kids are not receiving care
- Understanding Hospital billing
- Nicotine Addiction
  - ➢ Tobacco/smoking/vaping at the high school level
  - ➢ Vaping devices – high nicotine

The following medical conditions were noted as areas of concern:

- Alcoholism
- Alzheimer's disease
- Cancer
- Chronic disease
- Dementia
- HPV
- Opioid addiction
- Parkinson's disease
- Pulmonary Lung Disease

The final list of priority issues developed was greater than anticipated:

- Senior Home Care
  - ➢ Education about home care
- Access to nutritional food
- Depression/stress – all ages
- Access to health care for low income or uninsured—not enough free or sliding scale services
- Transportation
- Affordable housing
- Collaboration of Social Service Agency (holistic) Hope Group
- STDs in young and adults
- Opioid addiction education
- Cancer prevention
- Chronic disease prevention
- Alzheimer's education/management
- ADHD parent support and how to recognize signs for proper diagnosis
- Information sharing/promotion strategy
  - ➢ Need for digital strategy
- Outdoor Programs for County – low cost
- Improved medical access (mental health care, dental, vision)

B.   WORLD CAFÉ MEETING

The Community Advisory Board, in cooperation with the Greater Mercer Public Health Partnership, held a World Café Listening Session on April 25, 2018. A World Café, or Knowledge Café, is a structured conversation held with groups of people who discuss a topic area at several tables, with individuals switching tables periodically and being introduced to the previous discussion at their new table by a table host. Among the topics were, "What Does a Healthy Community Look Life?"; "Whose Voice Do We Still Need to Hear?"; and "What One Thing Do You Wish We Could All Work Together On Over The Next Three Years To Make Our Towns Healthier?" A summary of the perspectives provided by World Café participants is presented below. Please see **Appendix D** for the World Café Exercise Report.

What Does a Healthy Community Look Like?
- Access to healthy food
- Walkable communities; safe streets
- Little or no disease
- Employment
- Health knowledge/awareness
- Mental health wellness
- Safety
- Built/clean environment
- Access to health systems
- Community involvement

What Do You View as a Barrier to Good Health in Mercer County?
- Insurance
- Access to care
- Time to live healthy
- Communication
- Access to transportation
- Health literacy
- Low income, poverty and lack of resources
- Access to food
- Safe roads
- Stigma

Whose Voice Do We Still Need to Hear?
- Insurance representatives
- School district representatives
- Faith-based organizations
- Sick and elderly who can't get to meetings
- Adolescents/Youth
- LGBTQ community
- Law enforcement,
- Homeless community
- Illegal immigrants

Which parts are most relevant to our community health assessment?
- Mental health
- Access to resources
- Chronic disease data
- Overcoming barriers
- Data

From the discussions, the group formulated a summary strength, weaknesses, opportunities and threats (SWOT), as follows.

Strengths	Weaknesses
• CAB member interest in learning about community health needs • Collaboration between community partners • Member commitment/involvement • Shared resources • Using CHIP to apply for grants • Passion to support the underserved • Members want to be actively engaged and make a difference	• Unidentified unrepresented populations • Built environment (healthy/green spaces) • Access to healthy affordable foods especially for underserved • Lack of access to affordable transportation • Significant health inequities by zip code • Document meetings and conversations with GMPHP leadership • Limited internal quality improvement • Objectives weren't SMART • Collect more localized data (vulnerable populations by priority area
Opportunities	**Threats**
• Conduct focus groups Identify health inequities experienced by vulnerable populations • Collect mental health and substance abuse data to address mental health needs • Professional development training (ex:Lean Six Sigma QI Trainings) • Work with Priority Area Leaders to develop SMART objectives	• Lack of awareness of GMPHP's CHA/CHIP process among new members • Lack of funding for local data collection • Funding for programs, marketing and resources • Gaps in accountability in CHIP Implementation

5.   *MERCER COUNTY HEALTH PROFILE*

The Mercer County Health Profile provides comparative analysis of health outcomes and health factors across the region, neighboring counties, New Jersey, *Healthy People 2020* targets and County Health Rankings benchmarks. Health outcomes depict the health of a region. Health factors represent health influences within a geographic area; an evaluation of health behaviors, access to care, social, economic and cultural specific issues and behavioral health are provided. Included also are social determinants of health, factors that influence health outcomes, disparities in health, and equity in health care.

A.   *MERCER COUNTY OVERVIEW*

Mercer County is located in west central New Jersey, bordering Somerset and Hunterdon counties to the north and Middlesex, Monmouth and Burlington counties to the east and south. The Delaware River and Pennsylvania are on the western edge of the county. The county encompasses a land mass of 226.1 square miles with seven townships, three boroughs, and 34 zip codes. The county and its subdivisions are now largely suburban with Trenton as its principal urban center. The county is home to 371,183 residents, and ten percent of the U.S. population is within the 75 miles of Mercer County. Trenton is the capital of the U.S. state of New Jersey and the county seat of Mercer County.

Trenton and Hamilton are two of the most populated communities in the State of New Jersey. Trenton sits on the banks of the Delaware River and features four distinct wards with many neighborhoods. Its distinct architecture and new residential spaces that were once industrial buildings reflect emerging urban renewal. In contrast, small boroughs such as Pennington, Hightstown and Hopewell feature parks, recreational areas, a living history farm and wildlife center, local business establishments and residential neighborhoods. Five colleges and universities are located in Mercer County; Princeton is internationally recognized for its outstanding Princeton University.[5]

Mercer County's population is growing slower than the State overall. Between 2010 and 2010, Mercer County increased 1.8% compared to the statewide growth of 2.0%. Princeton saw the greatest population growth (5.4%) during this time. While Mercer County is 49.1% white, the greatest racial/ethnic increase occurred among Asians (29%), Hispanic/Latinos (20.4%) and persons of two or more races (24.8%). [6] The County's age distribution mirrors that of the State with 21% age 17 or less and 15% over age 65. Hopewell has a higher percentage of seniors (18.3%) and exceeds the statewide average of 16.7%.

B.   *SOCIAL DETERMINANTS OF HEALTH*

Social determinants of health include socioeconomic and environmental factors which influence health outcomes, disparities in health, equity in health care, and are important tools to assess health at the local level. *Healthy People 2020* provides a framework for assessing social determinants of health across five topic areas: economic stability; education; social and community context; health and health care; and, neighborhood and built environment. While a relatively stable county, there are residents of Mercer County that face many socioeconomic challenges that may have consequences for health and health care in the region.[7] In particular, the Trenton area differs from much of the suburban parts of the county in

[6] All demographic data are from Claritas 2019 population estimates.
[7] https://www.healthypeople.gov/2020/topics-objectives/topic/social-determinants-of-health
that its population is more racially and ethnically diverse, economically challenged and least favorable with regard to most health status indicators.

1. *Economic Stability*

Poverty

Many believe that the Federal Poverty Level (FPL) understates true poverty and is prejudicial to New Jersey as it fails to adjust for differences in the cost of living across states.

- Mercer County families, people, and children had a higher or equal percentage of an income below federal poverty level than the statewide rate.
- Fewer Mercer County seniors had income below poverty level compared to statewide.
- The highest poverty levels were noted in Trenton zip codes 08611 and 08608.

Income Below Federal Poverty Level
State and County Comparisons 2016

	Families	People	Children	Seniors
■ New Jersey	8.1%	10.9%	15.6%	8.1%
■ Mercer County	8.2%	11.2%	15.6%	7.5%
■ Burlington County	4.5%	6.5%	8.8%	4.9%
■ Camden County	10.3%	13.3%	19.9%	9.8%
■ Middlesex County	6.5%	8.9%	11.7%	7.4%
■ Trenton (08690)	1.1%	1.8%	1.3%	2.6%
■ Lawrence (08648)	4.0%	5.6%	4.9%	5.7%
■ Princeton (08540)	3.3%	5.5%	4.6%	5.2%
■ Hopewell (08525)	1.9%	4.1%	3.7%	2.1%
■ Trenton (08638)	13.9%	19.7%	30.5%	9.2%
■ Trenton (08611)	25.6%	25.3%	37.5%	20.7%
■ Trenton (08608)	0.0%	26.3%	0.0%	33.7%

Source: United States Census 2016 5 Year ACS Estimates[8]

- Mercer County's poverty rates are about equal to the State.
- Trenton zip code 08611 poverty rate among individuals (25.3%) and among families (25.6%) are higher than Mercer County and New Jersey.
- Hopewell has a lower percentage of individuals below poverty (4.1%) and families (1.9%) than the State and Mercer County.
- Trenton zip codes 08611, 08608 and 08638 have the among highest poverty rates for individuals and exceed those of the State.

* Source: US Census ACS Survey 2016 5 Year Estimates

**Percent of Families Living Below Poverty Level**
Mercer County
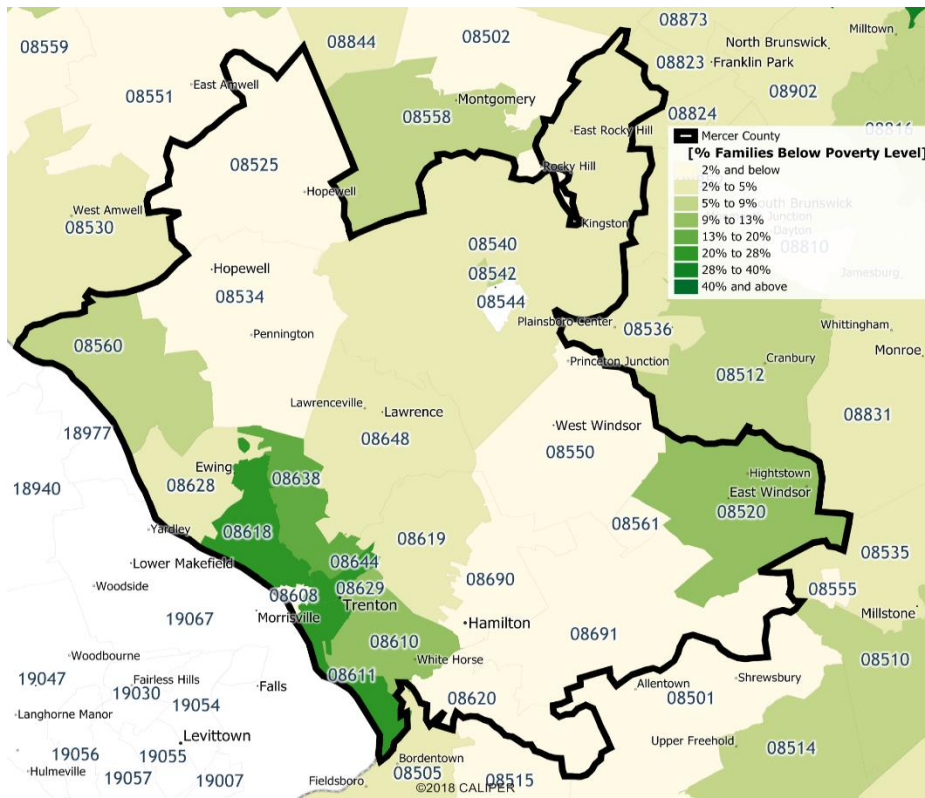

* Source: US Census ACS Survey 2016 5 Year Estimates

To ascertain the number of households that may be struggling due to the high cost of living in New Jersey we turned to the United Way's Asset Limited Income Constrained Employed project (ALICE)[9] to get a better idea of the number of households that earn more than the Federal Poverty Level but less than the basic cost of living in Mercer County. As shown in the chart below, the ALICE Threshold (AT) combined the number of households in poverty and ALICE households equals the population struggling to afford basic needs. In Mercer County, this percentage amounts to 27% (2014).

---

[9] http://www.unitedwaynj.org/ourwork/aliceatnj.php

Household Income 2007-2014
The United Way's analysis shows ALICE households in Mercer County may earn above the Federal Poverty Level for a single adult, $11,670, or $23,850 for a family of four, but less than the household survival budget.

Household Survival Budget, Mercer County

	SINGLE ADULT	2 ADULTS, 1 INFANT, 1 PRESCHOOLER
Monthly Costs		
Housing	$900	$1,225
Child Care	$–	$1,252
Food	$202	$763
Transportation	$382	$609
Health Care	$152	$510
Miscellaneous	$19	$640
Taxes	$350	$889
Monthly Total	$2,185	$5,611
ANNUAL TOTAL	$26,220	$67,332
Hourly Wage	*$13.11*	*$33.67*

There appear to be wide differences among municipalities in Mercer County in terms of the percentage of households living in poverty or at the AT. Trenton, Hamilton, Hightstown, Ewing and East Windsor are municipalities in which 30% or more of households are living in poverty or at the AT.

Households Living in Poverty or at the AT
Mercer County, 2014

Mercer County, 2014		
Town	Total HH	% ALICE & Poverty
East Windsor	9,790	33%
Ewing	12,661	35%
Hamilton	33,734	38%
Hightstown	2,071	36%
Hopewell	771	21%
Hopewell	6,672	15%
Lawrence	12,410	22%
Princeton	9,528	24%
Robbinsville	5,138	24%
Trenton	27,998	69%
West Windsor	9,664	19%

Note: Municipal-level data on this page is for Places and County Subdivisions, which include Census Designated Places (CDP). These are overlapping geographies so totals will not match county-level data.
*Municipal-level data often relies on 5-year averages and is not available for the smallest towns that do not report income.*
Unemployment

Those who are unemployed face greater challenges to health and well-being, including lost income and health insurance. Unemployed individuals are 54% more likely to be in poor or fair health as compared to employed individuals. According to County Health Ranking (CHR), racial and ethnic minorities and those with less education, often already at-risk for poor health outcomes, are most likely to be unemployed. Labor statistics indicate unemployment rates peaked at the height of the recession in 2010 and began to show some improvement by 2014.

- Between 2013 and 2016, the unemployment rate for Mercer County decreased from 7.1% to 5.6%.
- The 2016 Mercer County unemployment rate is higher than the State and all comparison counties other than Camden.
- Trenton zip code 08611 had the highest unemployment rate in 2016, 8.8%.

State, County and Select Zip Code Unemployment Comparisons

	2014	2016
New Jersey	6.4%	5.2%

Income

Income allows families and individuals to purchase health insurance and medical care, but also provides options for healthy lifestyle choices. While the starkest difference in health is between those with the highest and lowest incomes, this relationship persists throughout all income brackets.[10]

- Median household income levels for the Mercer County residents is slightly higher than the median level of state residents.
- Household income levels are lowest in Trenton zip code 08608 compared to all other geographic areas.
- Princeton and Hopewell had the highest median household income level and Trenton zip code 08608 had the lowest.
Median Household Income (2016)

	2014	2016
■ New Jersey	$72,062	$73,702
■ Mercer County	$74,118	$73,966
■ Burlington County	$79,612	$80,034
■ Camden County	$61,842	$63,028
■ Middlesex County	$80,118	$80,716
■ Trenton (08690)	$98,768	$96,503
■ Lawrence (08648)	$87,001	$93,696
■ Princeton (08540)	$128,822	$124,954
■ Hopewell (08525)	$132,407	$122,525
■ Trenton (08638)	$56,089	$53,435
■ Trenton (08611)	$38,186	$36,121
■ Trenton (08608)	$13,395	$15,855

Temporary Assistance Needy Families (TANF)

In order to qualify for TANF in New Jersey, applicants must comply with all requirements of Work First New Jersey. This includes signing over rights of child support payments, helping to establish paternity of children, cooperating with work requirements and applying for all assistance programs for which a household may be eligible. Additionally, eligible applicants must meet income and resource guidelines.[11]

- In 2017, 0.22% of Mercer County adults received TANF benefits, higher than the statewide rate.
- In 2017, 2.0% of Mercer County children received TANF benefits, greater than Burlington and Middlesex counties.

Supplemental Nutrition Assistance Program (SNAP)

SNAP offers nutrition assistance to millions of eligible, low-income individuals and families. The Food and Nutrition Service works with State agencies, nutrition educators and neighborhood and faith-based organizations to ensure that those eligible for nutrition assistance make informed decisions and access benefits.[12]

- In 2017, 5.2% of Mercer County adults received SNAP benefits, lower than the statewide rate.
- In 2017, 18.03% of Mercer County children received SNAP benefits, greater than Burlington and Middlesex counties.
- The percentage of Mercer County children and adults receiving SNAP benefits ranks in the middle performing quartile among all counties.

Children Eligible for Free Lunch

Public schools nationwide and across New Jersey have free lunch programs for children living at or near poverty. New Jersey requires public schools serve school lunches meeting at least one-third of recommended dietary allowances. According to the National School Lunch Program, the objective is "to provide a nutritious, well-balanced lunch for children in order to promote sound eating habits, to foster good health and academic achievement and to reinforce the nutrition education taught in the classroom."[13]

- In 2014-2015, the percentage of children eligible for free lunch (41%) was greater than the statewide rate.
- The Mercer rate for children eligible for free lunch is greater than that of Burlington and Middlesex counties.
- Mercer County is within the middle quartile compared to of all New Jersey counties for free school lunch eligibility.

## 2.   *Education*

Educational Attainment

Higher levels of education are linked to better health, healthier lifestyle decisions and fewer chronic conditions.[14] Lower levels of educational attainment often signals issues of health literacy and inability to follow medical advice.

- New Jersey and Mercer County did not meet the *Healthy People 2020 target of residents who did not complete* a high school education.

[14] www.countyhealthrankings.org/our-approach/health-factors

- The percent of Mercer County residents that did not complete high school is slightly higher than statewide.
- Trenton zip code 08611 had the highest level of individuals without a high school diploma (37.8%).
- Princeton zip code 08540 had the highest percent of the population with a graduate or professional degree (50.4%).

Limited English Proficiency

The lack of English proficiency can negatively impact one's ability to understand and follow medical directions. Mercer County residents experienced a decrease in the percentage of the population over age 5 with limited English proficiency.

- In 2016, according to the U.S. Census, 11.6% of Mercer County residents over age 5 report speaking English as "less than very well" compared to 12.2% of New Jersey residents.
- The percent of Mercer County residents with limited English proficiency increased by .3 percentage points between 2014 and 2016.

3.   *Social and Community Context*

Social Associations

Social isolation can negatively impact health outcomes. Having a strong social network is associated with healthy lifestyle choices, positive health status, and reduced morbidity and mortality. Participation in community organizations can enhance social trust and a sense of belonging.[15] Social associations include structured membership organizations such as civic organizations, bowling centers, golf clubs, fitness centers, sports organizations, religious organizations, political organizations, business and professional associations.

- Mercer County's rate of association per 10,000 population (11.3) is higher than the State and comparison counties.
- The rate of association per 10,000 has remained fairly consistent from 2013-2016.

4.   *Health and Health Care*

Access to affordable quality health care is important to physical, social, and mental health. Health insurance helps individuals and families access needed primary care, specialists, and emergency care, but does not ensure access. It is also necessary for providers to offer affordable care, be available to treat patients and be near patients. [16]

---

[16] http://www.countyhealthrankings.org/our-approach/health-factors/access-care
Health Insurance

The expansion of Medicaid coverage and the Affordable Care Act's (ACA) coverage provisions, which began taking effect in 2010, helped decrease the nation's uninsured rate by 7.2 percentage points, from 16 percent in 2016. That translates into 20.4 million fewer people who lacked health insurance in 2016 compared to 2010. The uninsured rate is estimated to have increased to 15.5% in the first quarter of 2018, meaning another 4 million lost coverage since 2016 due to changes in health policy and insurance offerings. The uninsured are less likely to have primary care providers than the insured; they also receive less preventive care, dental care, chronic disease management, and behavioral health counseling. Those without insurance are often diagnosed at later, less treatable disease stages than those with insurance and, overall, have worse health outcomes, lower quality of life, and higher mortality rates.

Neighborhoods with low health insurance rates often have fewer providers, hospital beds and emergency resources than areas with higher rates. Even the insured have more difficulty getting care in these areas.

Cost can be a barrier to care even for those who have insurance. Lack of insurance creates barriers to timely access to care for patients and financial burdens to the providers who care for them.

- Since 2013, the nonelderly population without health insurance in Mercer County has trended downward, decreasing from 14.56 percent to 9.88 percent in 2015.
- From 2013 through 2015, Mercer County had consistently lower rates of nonelderly population without health insurance than statewide.
- The 2015 percent of the nonelderly population without health insurance (9.88%) is higher than the *Healthy People 2020* target of 0% and the County Health Ranking Benchmark of 6%.

Access to Care

Access to affordable quality health care is important to ensuring physical, social, and mental health. Health insurance assists individuals and families to obtain primary care, specialists, and emergency care, but does not ensure access. Access to care goes beyond just insurance, it is also necessary for providers to offer affordable care, be available to treat patients and be near patients.[17]

Primary Care Physicians

Nationally, many areas lack sufficient providers to meet patient needs; as of June 2014, there are about 7,200 primary care, 5,000 mental health and 5,900 dental federally designated Health Professional Shortage Areas in the US. Having a usual primary care provider is associated with a higher likelihood of appropriate care and better outcomes. In 2017, 88% of Americans had a usual source of care, but those with low incomes are less likely to than those with higher incomes, and the uninsured are twice as likely as the insured to lack a usual care source.[18], [19]

- Within Mercer County, the ratio of population to primary care physicians declined slightly from 947:1 to 938:1.

---

[17] http://www.countyhealthrankings.org/our-approach/health-factors/access-care
[18] http://www.countyhealthrankings.org/our-approach/health-factors/access-care
[19] http://www.cdc.gov/fastfactsaccesstohealthcare.htm

- From 2013 through 2015, the ratio of population to primary care physicians in Mercer County was lower than statewide.
- The 2015 Mercer County ratio of population to primary care physicians (938:1) compared favorably to the County Health Rankings benchmark of 1,030:1 and performs in the highest quartile in comparison to the state.

Community Need Index [20]

The Community Need Index (CNI), jointly developed by Dignity Health and Truven Health in 2004, is strongly linked to variations in community healthcare needs and is a strong indicator of a community's demand for services.

Based on a wide array of demographic and economic statistics, the CNI provides a score for every populated ZIP Code in the United States. A score of 1.0 indicates a ZIP Code with the least need and a score of 5.0 represents a ZIP Code with the most need. The CNI is useful as part of a larger community health needs assessment to pinpoint specific areas with greater need than others.

The CNI score is an average of five barrier scores that measure socio-economic indicators of each community using 2017 source data:

1. Income Barrier
   - Percentage of households below poverty line, with head of household age 65 or older
   - Percentage of families with children under 18 below poverty line
   - Percentage of single female-headed families with children under 18 below poverty line
2. Cultural Barrier
   - Percentage of population that is minority (including Hispanic ethnicity)
   - Percentage of population over age 5 that speaks English poorly or not at all
3. Education Barrier
   - Percentage of population over 25 without a high school diploma
4. Insurance Barrier
   - Percentage of population in the labor force, aged 16 or more, without employment
   - Percentage of population without health insurance
5. Housing Barrier
   - Percentage of households renting their home

A comparison of CNI scores and hospital utilization reveals a strong correlation between need and use. Communities with low CNI scores can be expected to have high hospital utilization. There is a causal relationship between CNI scores and preventable hospitalizations and ED visits for manageable conditions. Communities with high CNI scores may have more hospitalization and ED visits that could

COMMUNITY NEED INDEX (Dignity Health)
Darker Red Areas Indicate A Higher CNI Score (Higher Need)

---

have been avoided with improved healthy community structures and appropriate outpatient and primary care.

- The CNI score for Trenton zip codes 08608 and 08609 (5.0) indicates highest need in the County, followed by Trenton zip codes 08611 (4.8) and Trenton zip codes 08618/Ewing and 08629/Hamilton (4.4).
- Conversely, Trenton zip code 08690/Hamilton Square's score (1.4) represents the lowest CNI score in the County followed by Hopewell, Pennington and Trenton zip code 08691/Robbinsville (1.6) and Trenton zip code 08620/Hamilton (1.8).

Community Needs Index

	County	ZIP Code	ZIP Code Description	CNI Score

Timeliness of Service

A key indicator of the timeliness of service is emergency department (ED) utilization for conditions that could have been treated in a primary care setting.

Reasons for accessing the ED instead of a more appropriate, lower acuity level of care include:
- No regular source of primary care
- Lack of health insurance
- Cost
- Transportation
- Office hours
- Citizenship status

Fifteen percent of renter-occupied households and 3.5% of owner-occupied households in Mercer County do not have a motor vehicle. Trenton and Ewing areas have nearly nine percent of households without a vehicle. Eight percent of Mercer County residents use public transit to commute for work. [21]

ED Utilization for Ambulatory Care Sensitive Conditions

Ambulatory Care Sensitive Conditions (ACSC) are potentially preventable medical conditions that are treated in the ED although more appropriate care should have been provided in a non-emergent outpatient primary care setting. ED utilization rates may be reduced by addressing primary care access issues. Higher rates of ACSC conditions in Emergency Departments may indicate primary care access issues poor(er) preventative care among the population and in some instances health barriers related to socio-economic status.

The map shows the total New Jersey ACSC Emergency Department Rate by county. Dark Red shading represents the counties with the 5 highest rates in the State. White Shading represents the counties with the 5 lowest rates in the State. Pink Shading represents counties between the highest and lowest "Top 5s".

- In 2016, Mercer County's ACSC ED visit rate (74.33/1,000) was 27.7% higher than the statewide rate (58.22/1,000).
- Mercer County had the sixth highest ACSC ED visit rate of the 21 Counties in 2016; at 74.33/1,000, this was a 1.2% increase from the 2013 rate.

Inpatient Utilization for Ambulatory Care Sensitive Conditions

Individuals may be admitted to the hospital due to an ACSC; higher rates of ACSC conditions among inpatients indicate primary care access issues, poor preventive care and barriers related to socioeconomic status.

- The Mercer County Service Area ACSC inpatient use rate is about the same as Statewide.
- Trenton zip code 08608 has the highest utilization for inpatient ACSC use rate.

5.   *Neighborhood and Built Environment*

The neighborhood and built environment contribute to health in a variety of ways. Pollution, crime, and access to healthy food and water are environmental and neighborhood factors that may be hazardous to a community's health.[22]
Air Quality

Outdoor air quality has improved since the 1990, but many challenges remain in protecting Americans from air quality problems. Air pollution may make it harder for people with asthma and other respiratory diseases to breathe.[23]   County level data masks ZIP Code level analysis that may reveal higher concentrations of air pollution, particularly in industrialized areas of a county.

- In 2012 the average daily density of fine particulate matter was 8.9 micrograms per cubic meter in Mercer County, lower than the statewide rate and all comparison counties.
- In 2012, Mercer County average daily measure of fine particles (8.9 PM2.5) is greater than the 2016 CHR national benchmark of 6.7 PM2.5.

Housing Built before 1950

The potential for exposure to lead based paint in housing units built before 1950 is high. A main source of lead exposure is found in household dust with lead-based paint. Children are highly vulnerable to exposure to lead because of its adverse effects on the developing brain and nervous system.[24]

- In 2016, 30.5% of the Mercer County housing stock was built before 1950 and had possible lead-based paint hazards. This rate is higher than the statewide comparison and the comparative counties.

Lead Hazards

The Centers for Disease Control and Prevention (CDC) defines lead poisoning in children as a blood lead level of 10 micrograms per deciliter (μg/dL) or above. Young children can be exposed by swallowing lead dust or soil that gets on their hands or objects they put into their mouths such as toys; swallowing leaded paint chips; breathing leaded dust or lead contaminated air and eating food or drinking water that is contaminated with lead.

Very high levels of lead can cause seizures, brain damage, developmental or intellectual disabilities, coma and even death. Exposure to lead, even at low levels, has been associated with decrease hearing, lower intelligence, hyperactivity, attention deficit, and developmental problems.[25] County level analysis cannot reveal individual town disparities in blood lead levels particularly in towns with housing stock built before 1950. Such homes are often found in older urban neighborhoods.

- In 2016, 0.80% of children in Mercer County had elevated blood levels.
- This rate has stayed consistent since 2013 and is higher than the rate statewide and for the comparison counties.

Access to Healthy Foods

Choices about food and diet are influenced by accessibility and affordability of retailers. Specifically, travel time to shopping, availability of healthy foods and food prices are key to decision making. Low-income families face greater barriers in accessing healthy and affordable food retailers, which in turn negatively affect diet and food security.[26]

- In 2015, 3.65% of Mercer County residents had food insecurity, fewer than all comparative counties. However, the 2010 rate (3.17%) was lower.
- The percent of Mercer County residents with limited access was the same as the rate statewide.

Injury and Crime Prevention

Injuries and violence are widespread. Most events resulting in injury, disability or death are predictable and preventable. Individual behaviors, physical environment, access to health services and the social environment affect the risk of unintentional injury and violence. Burglaries and motor vehicle crash deaths in Mercer County have seen steady decreases but are higher than rates statewide and violent crime has risen.

- In Mercer County, violent crime increased 8.2% from 2014 to 2016.
- The violent crime rate in Mercer County has historically been higher than the statewide rate.

Domestic Violence Offenses

Domestic violence can negatively impact a victim's health beyond the domestic violence incident. Victims of domestic violence exhibit physical and emotional problems including, but not limited to, chronic pain, depression, anxiety, eating disorders, and post-traumatic stress disorder.[27]

- Statewide domestic violence rates have remained fairly consistent.
- In 2016, the Mercer County rate of domestic violence arrests was lower than the statewide and the rates in all the comparative counties.

C.   HEALTH FACTORS

Health factors represent the influences that impact one's health. These include demographic, social, environmental, economic, and individual behaviors as well as clinical care and access to services. Social determinants are described in Section B above.

1.   Demographics

Age

Health disparities exist in all age groups. The Centers for Disease Control and Prevention reports that, although life expectancy and overall health has improved for most Americans, older adults are not benefitting equally due to economic status, race and gender. The overall proportion of older adults in Mercer County is lower than New Jersey. From 2018 to 2023, the population aged over 65 in Mercer County is projected to increase at a lower rate (2.2%) than the statewide increase projected at 2.4%.

- Between 2018 and 2023, New Jersey is projected to have a 1.9% decline among 0-17 year olds. The greatest decline will be in Hopewell (6.6%).
- Princeton's overall projected population growth (2.7%), between 2018 and 2023 is more than double that of the State (1.3%).
- The largest change is among those 65+. This cohort will increase across all geographic areas, the largest occurring in in Hopewell (18.5%).
- Mercer County women of child-bearing age (15-44) are projected to decrease by nearly 2% by 2023. Trenton zip codes 08611 and 08608 will decline in excess of the county and statewide averages.

Race and Ethnicity

Despite notable progress in the overall health of the Nation, there remain morbidity and mortality disparities by race and ethnicity. The population cohorts which historically have experienced poorer health status are anticipated to grow; therefore, the future health of America can be influenced by improving the health of these select groups. In Mercer County, the percentage of Black, Asian and Hispanic populations increased while the percentage of White residents has declined, heightening the vital need for addressing disparities in health and care among more vulnerable minority groups.[28]

- According to 2018 population estimates, 49.1% of Mercer County, 85.5% of Hamilton Square and 90.7% of Hopewell residents are White as compared to 54.4% statewide.
- In 2018, 20.7% of New Jersey residents are Hispanic, while nearly 59.5% of Trenton Zip Code 08611 and 26.7% of Trenton Zip Code 08608 residents are Hispanic.
- The Hispanic population in Mercer County increased 20.4% from 2010 through 2018.
- In 2018, 11.3% of Mercer County residents are Asian, somewhat higher than New Jersey (9.9%). That percentage is much higher in Lawrence (17.5%) and more than double in Princeton (29.8%).
- The Asian population in Mercer County increased 29.0% between 2010 and 2018.

Education

Lower levels of education attainment can indicate issues of health literacy and the ability to follow medical advice.

- In 2018, 5.5% of the residents of Mercer County have less than a 9th grade education.
- Trenton zip code 08611 rate at 18.6% is significantly higher.
- 31.5% of Hopewell population has a bachelor's degree, significantly more than the County and the State.

2. *Clinical Care Measures*

Inpatient and ED Utilization

Factors impacting hospital utilization may include policy change, advances in technology, practice patterns and demographics. Many federal and state health care payment reforms, including the Affordable Care Act (ACA), were designed to improve care transitions, coordination of care, enhance ambulatory care and improve access to primary care. The anticipatory results would include improved coordinated care and declines in inpatient and ED utilization.

Inpatient

- Mercer County's 2016 inpatient utilization rate (171.67/1,000) was 11.5% higher than the State (160.22/1,000).
- Inpatient use rates for the top five zip codes ranged from 185.72/1,000 to 233.43/1,000, all higher than the state and county rates.
- Trenton zip codes recorded the highest inpatient use rates in the county.

Emergency Department

According to the 2013-2014 National Health Interview Survey, reasons for U.S adults (age 18-64) ED visits are: seriousness of the medical problem (77%); doctor's office not open (12%;) and lack of access to other providers (7%).

- Mercer County's 2016 ED visit rate (434.1/1,000) was 23% greater than State rate (352.20/1,000).
- Three of the top five zip codes with the highest ED use rates are more than double the countywide rate.
- The top five zip codes (08609, 08611, 08618, 08629 and 08608) are higher than the State average.

Cesarean Section

A Cesarean Section (C-section) is a major surgical procedure performed because of health problems in the mother, position of the baby, and/or distress in the infant.[29] The U.S. cesarean delivery rate reached a high of 32.9% of all births in 2009, rising 60% from 1996 (20.7%). Recently, the American College of Obstetricians and Gynecologists developed clinical guidelines for reducing the occurrence of non-medically indicated cesarean delivery and labor induction prior to 39 weeks. Efforts to reduce such births

---

[29] http://www.nlm.nih.gov/medlineplus/cesareansection.html

include initiatives to improve perinatal care quality, and changes in hospital policy to disallow elective delivery prior to 39 weeks and education of the public.[30]

- Mercer County's 2016 primary C-section rate (23.3%) is lower than the State rate (25.2%).
- The 2016 Mercer County primary C-section rate (23.3%) was higher than neighboring Camden, Middlesex, and Burlington County rates.
- In 2016, the Mercer primary C-section rate was in the middle quartile of New Jersey counties, and was similar to the *Healthy People 2020* target.
- Countywide, women with a primary C-section trended downward from 2013 through 2015, decreasing from 24.2% in 2013, to 22.8% in 2015. The rate increased again in 2016 (23.3%).

3. *Health Behaviors*
Maternal / Fetal Health

Prenatal Care

The medical care a woman receives during pregnancy monitors her health and the developing fetus. Low-risk pregnancies should visit a prenatal provider every four or six weeks through 28 weeks, then every two or three weeks from weeks 28-36, and finally every week in the ninth month until delivery. A high-risk pregnancy requires additional visits.[31] Pregnant women who do not receive adequate prenatal care risk undetected complications and an increased possibility of adverse outcomes.

Early and regular prenatal care is a strategy to improve health outcomes for mothers and infants. Two significant benefits are improved birth weight and decreased preterm delivery. Infants born to mothers who receive no prenatal care have an infant mortality rate five times higher than mothers who receive appropriate prenatal care in the first trimester of pregnancy. Enrollment in care during the first trimester of pregnancy reflects timely initiation of prenatal care.[32]

- In 2016, only 67.8% of live births to Mercer County moms received first trimester care compared to a high of 86.1% in 2010.
- Mercer County had the lowest percentage of live births with first trimester prenatal care in all comparative counties.
- The percentage of Mercer County moms receiving first trimester care was lower than the *Healthy People 2020* target of 77.9%.

High Risk Sexual Behaviors
Teen Pregnancy

In 2016, there were 20.3 births/1,000 American adolescent females aged 15-19 years; approximately 209,809 babies were born to teens, with nearly eighty-nine percent of these births occurring outside of marriage. The national teen birth rate has trended downward over the past 20 years. In 1991, the U.S. teen birth rate was 61.8 births/1,000 adolescent females. However, the U.S. teen birth rate remains higher than that of many other developed countries, including Canada and the United Kingdom.[33] Pregnant teens are less likely than older women to receive recommended prenatal care and are more likely to have pre-term or low birth weight babies. Teen mothers are often at increased risk for STIs and repeat pregnancies, are less likely than their peers to complete high school and more likely to live below the poverty level and rely on public assistance. Risky sexual behaviors can have high economic costs for communities and individuals.[34]

- The percent of Mercer County births to teens age 15-17 trended downward from 2007 through 2016.
- For both age cohorts, 15-17and 15-19, the percent of Mercer County teen births exceeded the statewide percentage.
- The percentages for Mercer County in the 15-17 cohort is in the middle performing quartile when compared to all New Jersey counties.

In a 2016 CDC Teen Pregnancy Statistics data brief, *State Disparities in Teenage Birth Rates in the United States*, based upon 2014 data, New Jersey is one of 10 states with the lowest teen birth rates (<20/1,000) compared to National figures (41.5/1,000). However, the New Jersey rate shows tremendous variability when examined by town.

- Rates in Trenton zip codes 08608 and 08611) have the greatest impact on the county's average rate for teen births. Trenton zip code 08608 birth rate to teens aged 15-19 in 2016 (197.6/1,000) is fifteen times the Mercer County rate (13.1/1,000).

Sexually Transmitted Infection

Sexually transmitted infections (STI) are caused by bacteria, parasites and viruses contracted through relations with an infected individual. There are more than 20 types of STIs, including Chlamydia, Gonorrhea, Genital herpes, HIV/AIDS , HPV, Syphilis and Trichomoniasis. Most STIs affect both men and women, but in many cases health problems may be more severe for women. If pregnant, a STI can cause serious health complications for the baby.[35]

- Chlamydia is the most prevalent STI. In 2016, the Mercer County rate (480/1,000) was higher than the statewide rate and greater than that of Burlington and Middlesex counties.
- In 2016, the gonorrhea rate in Mercer County (118.3) was greater than the rate for New Jersey and for Burlington and Middlesex counties. [36]

HIV/AIDS

Human immunodeficiency virus (HIV) is spread mainly by having sex with someone infected with HIV or sharing needles with someone positive. Approximately 50,000 new HIV infections occur in the United States each year.

- County-wide HIV/AIDS prevalence rates declined between 2013 (524.7/100,000) and 2015 (446.4/100,000).
- In 2015, HIV/AIDS prevalence (446.6/100,000) was greater than its comparison counties and the statewide rate.
- The HIV rate in Mercer County is greater than County Health Rankings benchmark of (362/100,000).

Individual Behavior

A CDC report indicates that people can live longer if they practice one or more healthy lifestyle behaviors including: eating a healthy diet, not smoking, regular exercise and limiting alcohol consumption. People who engage in all of these behaviors are 66 percent less likely to die early from cancer, 65 percent less likely to die early from cardiovascular disease and 57 percent less likely to die early from other causes compared to those who do not engage in any of these behaviors.[37]

[37] http://www.cdc.gov/features/livelonger/

Tobacco Use

Tobacco use is the leading cause of preventable death in the United States. Smoking leads to disease and disability, and harms nearly every organ in the body, and causes cancer, heart disease, stroke, diabetes, and lung diseases such as emphysema, bronchitis, and chronic airway obstruction. Exposure to secondhand smoke can lead to lung cancer and heart disease. Each year, smoking kills approximately 480,000 Americans, including 41,000 from secondhand smoke. On average, smokers die 10 years earlier than nonsmokers.

About 15% of U.S. adults smoke. Each day, nearly 3,200 youth smoke their first cigarette, and 2,100 people transition from occasional to daily smokers. Smokeless tobacco also leads to various cancers, gum and teeth problems, and nicotine addiction. Almost 6% of young adults use smokeless tobacco and half of new users are younger than 18.[38,39]

- In 2016, Mercer County had the lowest percentage of adults in the four-county area who reported smoking (10.8%).
- Between 2014 and 2016, smoking rates declined from 18.7% to 10.8%.
- Mercer County's percentage of adults who are current smokers (10.8%) is lower than the _Healthy People 2020_ target of 12.0% and the County Health Rankings benchmark of 14.0%.

Alcohol Use

Although moderate alcohol use is associated with reduced risk of heart disease and diabetes, excessive consumption is the third leading cause of preventable death nationally. Excessive consumption considers both the amount and the frequency of drinking. Short-term, excessive drinking is linked to alcohol poisoning, intimate partner violence, risky sexual behaviors, failure to fulfill responsibilities and motor vehicle crashes. Over time, excessive alcohol consumption is a risk factor for hypertension, acute myocardial infarction, fetal alcohol syndrome, liver disease and certain cancers.[40]

- The binge drinking rate in Mercer County has decreased since 2012, from a rate of 15.6% to 12.1%.
- In 2016, 12.1% of adults in Mercer County reported binge drinking, lower than its comparison counties.
- Mercer County's percentage of reported binge drinking (12.1%) ranks in the top performing quartile among counties statewide.

[41] Question: During the past 30 days how many days per week or per month did you have at least one drink of any alcoholic beverage? If response is not 0 then ask: Considering all types of alcoholic beverages how many times during the past 30 days did you have 5(for males)/4(for females) or more drinks on an occasion? "Binge Drinking" is defined when someone has at least 5(for males)/4(for females) or more drinks on an occasion a month.

Diet

Healthy food is a key component to good health; insufficient nutrition hinders growth and development. As of 2016, 41 million Americans struggled with hunger in the U.S. A household that is food insecure has limited or uncertain access to enough food to support a healthy life. Obesity among food insecure people, as well as low income individuals, occurs in part because they are often subject to the same challenges as other Americans (more sedentary lifestyles, increased portion size) and because they face unique challenges in adopting and maintaining healthy behaviors, including limited resources and lack of access to affordable healthy food, cycles of food deprivation and overeating, high levels of stress and anxiety, fewer opportunities for physical activity, greater exposure to marketing of obesity promoting products, and limited access to health care.[43]

- Over 33% of Mercer County adults reported a BMI at or over 30 in 2016.
- From 2011 to 2014 the rate of adults with a BMI $\geq$ 30 fluctuated from a low of 23.1% in 2012 to a high of 33.7% in 2016.
- The 2016 percent of Mercer County residents with a BMI $\geq$ 30 (33.7%) is above the *Healthy People 2020* target of 30.5% and the County Health Rankings benchmark of 26%.

Exercise

Inadequate physical activity contributes to increased risk of coronary heart disease, diabetes and some cancers. Nationally, half of adults and nearly three-quarters of high school students do not meet the CDC's recommended physical activity levels.[44]

- Countywide residents reporting no leisure-time physical activity trended upward from 2014 through 2016, increasing almost 10 percentage points.
- From 2014 through 2016, the percent of Mercer County residents with no leisure time physical activity was lower than statewide.
- The 2016, percentage of Mercer County residents reporting no leisure-time physical activity (29.1%) is lower than the *Healthy People 2020* target of 32.6% but comparable to the County Health Rankings benchmark of 29%.

Health Screenings

Screening tests can detect disease and conditions in early stages, when they may be easier to treat.

Cancer Screening

Breast Cancer (mammography)

According to the American Cancer Association, women ages 40 to 44 should have the choice to start annual breast cancer screening with mammograms (x-rays of the breast) if they wish to do so. Women age 45 to 54 should get mammograms every year. Women 55 and older should switch to mammograms every 2 years, or can continue yearly screening. Screening should continue as long as a woman is in good

health and is expected to live 10 more years or longer. Women should also know how their breasts normally look and feel and report any breast changes to a health care provider right away. Some women – because of their family history, a genetic tendency, or certain other factors – should be screened with MRIs along with mammograms. The number of women who fall into this category is very small.

- The percentage of woman who had a mammogram in the last 2 years increased from 50.5% to 76.4% between 2012-2016.
- Mercer County is similar to the comparison counties and better than the County Health ranking benchmark of 71%.

Cervical Cancer (pap smear)

According to the American Cancer Association, cervical cancer testing should start at age 21. Women between the ages of 21 and 29 should have a Pap test done every 3 years. Women between the ages of 30 and 65 should have a Pap test plus an HPV test (called "co-testing") done every 5 years. Women over age 65 who have regular cervical cancer testing in the past 10 years with normal results should not be tested for cervical cancer. Women with a history of a serious cervical pre-cancer should continue to be tested for at least 20 years after that diagnosis, even if testing goes past age 65. Some women – because of their health history (HIV infection, organ transplant, DES exposure, etc.) – may need a different screening schedule for cervical cancer.

- Mercer County has the lowest percentage of women receiving pap tests in the comparative county area and it is below the state rate.
- As of 2016, 64.4% of Mercer County women received pap tests, decreasing from 71.2% in 2014.
- The Mercer County percent of women undergoing cervical cancer screening is below the *Healthy People 2020* target.

Colo-rectal Cancer (sigmoidoscopy or colonoscopy)

According to the American Cancer Association, starting at age 50, both men and women should follow one of these testing plans: colonoscopy every 10 years, CT colonography (virtual colonoscopy) every 5 years, flexible sigmoidoscopy every 5 years, or double-contrast barium enema every 5 years.

- Between 2012-2016 the number of residents who report ever having a colonoscopy or sigmoidoscopy has increased 15.7 percentage points.
- The percentage of Mercer County residents reporting having these tests is higher than the *Healthy People 2020* target 70.5%.

Diabetes

There are several ways to diagnose diabetes including A1C, Fasting Plasma Glucose (FPG), Oral Glucose Tolerance Test (OGTT) and Random (Casual) Plasma Glucose Test. Diabetes screenings are an effective means of diagnosing and managing illness.

- The percentage of Mercer County diabetic Medicare enrollees that received screening increased from 83.2% in 2009 to 84.3% in 2014.
- In 2014, Mercer County had fewer diabetic Medicare enrollees that received HBA1C screening than Burlington and Middlesex County.

Immunizations

It is better to prevent disease than to treat it after it occurs; vaccines prevent disease and save millions of lives. Vaccines introduce the antigens that cause diseases. Immunity, the body's means to preventing disease, recognizes germs and produces antibodies to fight them. Even after many years, the immune system continues to produce antibodies to thwart disease from recurring. Through vaccination we can develop immunity without suffering from disease.[45]   Evidenced–based; CDC guidelines, public health benefit – individual and herd.

---

[45] http://www.cdc.gov/vaccines/vac-gen/howvpd.htm#why

Childhood Immunizations: DPT, polio, MMR & Hib (aged 19-35 months) [46]

Young children are readily susceptible to disease and the consequences can be serious or life-threatening. Childhood immunizations minimize impact of vaccine preventable diseases. The incidence, prevalence, morbidity, and mortality of many communicable diseases have significantly declined in Western countries largely because of national immunization strategies aimed at infants and children. It has been estimated that for each U.S. birth cohort receiving recommended childhood immunizations, around 20 million illnesses and more than 40,000 deaths are prevented, resulting in $70 billion in savings. Vaccinations are effective, primarily due to two factors. First, once a person is immunized against a specific pathogen, the rate of that disease, as well as its associated asymptomatic carrier state, is decreased.[6] Second, when a large population is immunized, unvaccinated individuals benefit from "herd immunity," which is a reduced risk of exposure to pathogens.[6] Consequently, children's health has improved, and the quality and length of their lives have increased.
Conflicting information in the news and on the internet about children's immunizations may cause vaccine hesitancy among select parents. In an effort to reduce childhood morbidity and mortality, the Centers for Disease Control and Prevention (CDC) Advisory Committee on Immunization Practices (ACIP) issues annual recommendations and guidelines for childhood and adolescent immunizations. However, some parents decline or delay vaccinating their children or follow alternative immunization schedules because of medical, religious, philosophical, or socioeconomic reasons. Health care provider-based interventions have been suggested to overcome such vaccine noncompliance, including patient counseling; improving access to vaccinations; maximizing patient office visits; offering combination vaccines; and using electronic medical records (EMRs) and practice alerts. Community- and government-based interventions to improve parent and patient adherence include public education and reminder/recall strategies, financial incentives, and providing alternative venues for vaccination.[47]

- In 2016, 92.9% of first grade students in Mercer County had received all required immunizations compared to 92.7% statewide.
- 93.9% of all Mercer County students received all required immunizations, .5 percentage point lower than statewide.

---

[46] Combined 4 vaccine series (4:3:1:3) refers to 4 or more doses of DTP/DT, 3 or more doses of poliovirus vaccine, 1 or more doses of MCV and 3 or more doses of Hib.http://www.cdc.gov/vaccines/imz-managers/coverage/nis/child/tech-notes.html)

Adult Flu

Immunizations are not just for children. As we age, the immune system weakens putting us at higher risk for certain diseases. Greater than 60 percent of seasonal flu-related hospitalizations occur in people 65 and older. The single best way to protect against the flu is an annual vaccination.[48]

- Over the last six years the percentage of adults who had a flu shot decreased from 62.7% to 52.8%.
- In 2016, a lower percentage of Mercer County adults 65+ had a flu shot than residents statewide and in the comparative counties.
- In 2016, the percent of Mercer County adults that received the flu shot (52.8%) in the past year is lower than the *Healthy People 2020* target of 90.0%, and within the lowest performing quartile of counties statewide.

Adult Pneumonia

The pneumococcal vaccine protects us against some of the 90 types of pneumococcal bacteria. Pneumococcal vaccine is recommended for all adults 65 years or older.[49]

- In 2016, nearly 70% of adults 65+ had received a pneumonia shot. This rate is higher than the statewide rate.
- Over the last six years the rate of adults 65+ who had a pneumonia shot ranged from a low of 58% in 2015 to a high of 70.6% in 2011.
- In 2016, the percent of Mercer County adults that had a pneumonia vaccine (69.3%) was higher than statewide but lower than the *Healthy People 2020* target (90%).

Behavioral Health Use Rates

- Inpatient Mental Health rates for Mercer County were lower than the statewide use rates in 2016.
- Trenton zip code 08608 rate is higher than all comparative towns.
- ED Mental Health rates in Mercer County were higher than the statewide totals.
- Rates for both Trenton zip codes 08611 and 08608 are noticeably higher than all other comparative figures.

Mental Health Use Rate /1,000 Population: 2016
*Source: UB-04 2015 Discharges; Claritas Population Estimate
** Mental Health Defined As MDC 19, Substance Abuse Defined As MDC 20

Substance Abuse

Substance abuse has a major impact on individuals, families and communities. In 2005, an estimated 22 million Americans struggled with a drug or alcohol problem. Almost 95 percent of people with substance use problems are considered unaware of their problem. These estimates highlight the importance of increasing prevention efforts and improving access to treatment for substance abuse and co-occurring disorders.[50]

Inpatient
- Across all age cohorts except those 0-17 county-wide, there was an increase in inpatient admissions for substance abuse from 2012 through 2016.
- Compared to statewide, in 2016, Mercer County had fewer residents with an inpatient admission for substance abuse among persons across all age groups except those 65+ where rates were higher than statewide.

D. HEALTH OUTCOMES

Disease-specific mortality, health status and morbidity are among the outcomes presented. Indicators of general health and mental health measures are also discussed in this section.

1. Mortality - Leading Cause of Death

According to the CDC, mortality statistics are one of few data sets comparable for small geographic areas, available for long time periods and appropriate as a primary source for public health planning.

- Between 2013 and 2016, five of the top 10 age-adjusted mortality rates declined, with greatest decreases in stroke (-14.8%), diabetes mellitus (-3.7%) and Alzheimer's disease (-3.2%).
- Since 2008, the top COD (Heart Disease), experienced a decrease of -2.3%.
- Nephritis, nephrotic syndrome, and nephrosis increased 39.3% from 2013 (the largest percent increase), Chronic liver disease and cirrhosis increased 30.1% between 2013-2016.

Heart Disease (1)

Heart disease includes several conditions, most commonly, coronary artery disease, angina, heart failure and arrhythmias. Nationally, statewide and in Mercer County, heart disease remains the leading cause of death. Responsible for 1 in every 4 deaths, approximately 610,000 people die of heart disease in the United States each year.

- In 2016, the age-adjusted mortality rate for heart disease was lower than the statewide rate, and the rates for Burlington and Camden counties.
- Despite outperforming the State, the mortality rate of 193.0/100,000 remains far higher than the *Healthy People 2020* target of 103.4/100,000.

Cancer (2)

Although there are many types of cancer, all originate from abnormal cells with untreated disease.[51] Approximately half of American men and one-third of women will develop some form of cancer throughout their lifetimes. Cancer risk may be reduced by basic lifestyle modifications including limiting or avoiding tobacco, sun protection, being physically active and eating healthy foods. Early detection greatly improves positive outcomes. Cancer is the second leading cause of death in the United States, New Jersey and Mercer County.[52]

- Mortality rates for cancer in Mercer County have been increasing since 2007.
- In 2016, the mortality rate for cancer (184.9) was slightly higher than the statewide rate (183.1), and lower than the rate for Burlington (216.8) and Camden (195.6) counties.
- The mortality rate of 184.9/100,000 is higher than the *Healthy People 2020* target of 161.4/100,000 and places the county in the middle performing quartile statewide.

Stroke (Cerebrovascular Diseases) (3)

A stroke occurs when a clot blocks blood supply to the brain or if a blood vessel within the brain bursts.

- In 2016, Mercer County's stroke mortality rate 35.8/100,000 was lower than the comparison counties of Burlington and Camden.
- Over the last 10 years, the stroke mortality rate per 100,000 ranged from a low of 31.3/100,000 in 2012 to a high of 43.5/100,000 in 2007.
- The stroke mortality rate of 35.8/100,000 is higher than the *Healthy People 2020* target of 34.8/100,000; however, it is in the best performing quartile in the State.

Unintentional Injuries (4)

The majority of unintentional injuries are preventable and predictable. Deaths due to unintentional injury often occur as a result of motor vehicle accidents, falls, firearms, drownings, suffocations, bites, stings, sports/recreational activities, natural disasters, fires, burns and poisonings. Public Health prevention strategies including minimum age drinking requirements, seatbelt and helmet laws, smoke alarms, exercise programs and other safety awareness campaigns reduce unintentional injury and death.[53]

- In 2016, the rate for unintentional injuries 35/1,000 was lower than the statewide rate and the rate for Burlington, Camden, and Middlesex Counties.
- Rate for unintentional injuries in Mercer County fluctuated between 2007-2016 with an overall increase to 35/1,000.
- The mortality rate of 35/100,000 is slightly lower than the *Healthy People 2020* target of 36.4/100,000.

Alzheimer's Disease (5)

Alzheimer's disease is a progressive illness that begins with mild memory loss leading to loss of ability to carry a conversation or respond to the environment. The disease involves parts of the brain that control thought, memory and language. In 2013, an estimated 5 million people living in the U.S. were living with Alzheimer's disease. By 2050, this number is projected to increase to 14 million people.[54]

- Between 2008 and 2016, age-adjusted mortality rates for Alzheimer's disease declined from 25 to 24/1,000, or 3.2%.

2.   *Premature Deaths*

An alternate method to reviewing crude or age-adjusted death rates as a measure of premature mortality is assessing Years of Potential Life Lost (YPLL). YPLL calculate the number of years of potential life lost for each death occurring before a predetermined end point, in this case, age 75 per 100,000 population. Premature deaths are reviewed to highlight potentially preventable adverse outcomes.

- The number of years of potential life lost 6,064 was higher in Mercer County than statewide and the surrounding counties of Burlington and Middlesex.
- The 2014-2016 premature death rate of 6,064 was higher than the County Health Ranking target of 5,300.

3.   *Behavioral Health-Related Deaths*

Mental health is a state of well-being in which an individual realizes his or her own abilities, copes with normal life stresses, works productively, and is able to contribute to his or her community. Mental illness includes diagnosable mental disorders or health conditions characterized by alterations in thinking, mood, or behavior (or some combination thereof) associated with distress and/or impaired functioning. Depression, the most common type of mental illness, is associated with higher rates of chronic disease, increased health care utilization, and impaired functioning. However, rates of mental illness treatment remain low, and often the treatment received is inadequate.

- Statewide deaths due to suicide decreased from 2014 (8.8/100,000) to 2016 (7.7/100,000), or 11%. Displaying a similar trend, the Mercer County's suicide rate decreased from 6.5/100,000 to 5.7/100,000 for the same period.
- The current rate 5.7/100,000 is lower than the statewide rate of 7.7/100,000.
- The suicide rate of 5.7/100,000 is lower than the *Healthy People 2020* target of 10.2/100,000.

4. *Infant Mortality*

Infant mortality, the death of a baby prior to his or her first birthday, is t*raditionally* used as an indicator of the health and well-being of a nation. Infant mortality is calculated as the number of infant deaths under age 1 per 1,000 live births. Great disparities exist in infant mortality by age, race, and ethnicity. Most frequent causes are serious birth defect, preterm birth/low birth weight, Sudden Infant Death Syndrome (SIDS), maternal complications of pregnancy, and injury.[55]

- The overall infant mortality rate declined statewide 11.5% from the period 2007-2009 (5.2/100,000) to 2013-2015 (4.6/100,000). Infant mortality has been declining in Mercer County from 8.5/100,000 in 2004-2006 to 7.0/100,000 in 2013-2015.
- The infant mortality rate for 2013-2015 was higher than statewide, Burlington and Middlesex County rates.
- The 2013-2015 infant mortality rate of 7.0/100,000 is higher than the *Healthy People 2020* target of 6.0/1,000 and the County Health Rankings benchmark of 5/1,000.

5.   ***Low and Very Low Birth Weight Infants***
Birth weight is the most important factor affecting neonatal mortality and a significant determinant of post neonatal mortality. Low birth weight infants (less than 2,500 grams) are at an increased risk for health problems ranging from neurodevelopmental disabilities to respiratory disorders.[56]   Racial disparities in low birth weight babies persist; nationally, non-Hispanic Black infants continue to die at nearly twice the rate of non-Hispanic Whites.

Low Birth Weight
- Mercer County had the second highest percentage of low birth weight infants among the comparative counties.
- The 2016, low birth weight rate of 8.10% was higher than the *Healthy People 2020* target of 7.8%;

Very Low Birth Weight
- Very low birth weight babies (less than 1,500 grams) are at greater risk of adverse outcomes than low birth weight babies.
- Mercer County had the second highest percent of very low birth weight babies among the comparative counties.
- The 2016, the very low birth weight rate of 1.7% is higher than the *Healthy People 2020* target of 1.4%.

6.   *Health Status and Behavioral Health Status*

Health status and behavioral health status are broad multidimensional concepts including self-report measures of physical and mental health.

Behavioral Risk Factor Surveillance System (BRFSS), the nation's premier system of health-related telephone surveys, collects data about U.S. residents regarding health-related risk behaviors, chronic health conditions and use of preventive services. In 1984, the survey began collecting data in 15 states and is currently conducted in all states including Washington D.C. and three United States territories. The most recent data available are for the year 2016.

General Health Status
- Only 14.8% of Mercer County residents reported their health as being fair or poor compared to 17.5% of New Jersians.
- Burlington County had the lowest percent of residents report their health to be fair or poor at 12.10%.
- The 14.8% of Mercer County individuals reporting "fair or poor" health in 2016 was higher than the County Health Ranking target of 12.0%.

Asthma

Asthma, a chronic lung disease often with childhood onset, inflames and narrows airways and causes recurring periods of wheezing, chest tightness, shortness of breath and coughing.[57] The exact cause of asthma is unknown; however, researchers believe genetic and environmental factors are involved. Factors may include: atopy, parents with asthma, certain respiratory infections during childhood and contact with some airborne allergens or exposure to some viral infections in infancy or in early childhood when the immune system is developing.[58]

- According to the 2016 BRFSS survey, 15.6% of Mercer County residents reported being told they have asthma compared to 12% statewide.
- The rate of asthma among Mercer County residents was higher than the statewide rate and rates in Burlington and Middlesex County.

COPD (excluding Asthma)

Chronic Obstructive Pulmonary Disease (COPD) is a group of diseases that cause airflow blockage and breathing-related problems including emphysema, chronic bronchitis. In the United States, tobacco smoke is a key factor in the development and progression of COPD, although exposure to air pollutants in the home and workplace, genetic factors, and respiratory infections also play roles.

- Rates of residents hospitalized with an initial diagnosis of COPD were greatest in Trenton zip code 08608 from 2013 through 2016.
- In 2016, the rate of hospitalization for patients with a diagnosis of COPD was highest in Trenton zip code 08608 (55.50/1,000) and lowest in Princeton zip code 08540 (7.01/1,000).

Preliminary data on Mercer County residents that received care at any of the Trenton HIE participating facilities shows that:
- The largest number of claims per patient (3.1) was due to a diagnosis of COPD.

- Medications for respiratory conditions (e.g., albuterol and nasal inhalers) were responsible for the largest number of pharmacy claims.
- The largest number of pharmacy claims per patient corresponded to the top two medications.

Diabetes

Diabetes is indicated by high levels of blood glucose as a result of problems in insulin production, effectiveness, or a combination of both. The three most common types of diabetes are Type 1, Type 2 and Gestational. Individuals with diabetes may develop serious health complications including heart disease, stroke, kidney failure, blindness, amputation and premature death.

Type 1 develops when insulin producing cells located in the pancreas are destroyed. There is no known way to prevent Type 1 diabetes. In order to survive, Type 1 diabetics must have insulin delivered by injection or pump. Type 2 primarily onsets with insulin resistance disorder in which cells within the muscles, liver, and fat tissue are unable to properly use insulin. Higher risk for developing Type 2 diabetes is associated with older age, obesity, family history of diabetes, history of gestational diabetes, impaired glucose metabolism, physical inactivity, and race/ethnicity. African Americans, Hispanics/Latinos, American Indians, some Asians, and Native Hawaiians or other Pacific Islanders are at particularly high risk for Type 2. Gestational diabetes is a form of glucose intolerance diagnosed during the second or third trimester of pregnancy. The risk factors for gestational Diabetes are similar to those for type 2 diabetes.[59]

- 12.2% of Mercer County residents reported being told they had diabetes in 2016, greater than the statewide rate.
- The percent of Mercer County residents reporting diabetes increased from 8.3% in 2011 to 12.2% in 2016.
- In 2016, Mercer County had the second highest percentage of patients reporting diabetes among comparison counties. Mercer County is in the middle performing quartile for diabetes as compared to all 21 counties statewide.

Arthritis

Arthritis affects more than 1 in 5 adults and is the nation's most common cause of disability. A*rthritis* describes more than 100 rheumatic diseases and conditions that affect joints, the tissues which surround the joint and other connective tissue. The pattern, severity and location of symptoms vary depending on the specific form of the disease. Typically, rheumatic conditions are characterized by pain and stiffness in and around one or more joints. The symptoms can develop gradually or suddenly.[61]

---

[61] http://www.cdc.gov/arthritis/basics.htm

- In 2016, 22.9% of adults in Mercer County reported being told that they have arthritis, lower than the rates in Burlington and Camden counties and higher than the rate in Middlesex County.
- Since 2013, the rate for adults with arthritis increased from 22.1% to 22.9% and has remained slightly lower than the rate statewide.

6.   *ASSETS AND GAPS ANALYSIS*

The Assets and Gaps Analysis summarizes and highlights each component of the CHA. Assets highlight Mercer County information indicating improvement over time in comparison to other counties and the State or in comparison to other races and genders. Gaps focus on disparities in Mercer County that have a negative trend, in comparison to other counties and the State or in comparison to other races or genders.

A.   *HEALTH DISPARITIES*

Economic Status

ASSETS

- The rate of unemployment in Mercer County declined between 2013 and 2016.
- Median household income in Mercer County decreased between 2014 and 2016.
- The percent of Mercer County adults and children receiving SNAP benefits was lower than the rate statewide.
- The percent of Mercer County residents with a graduate or professional degree was higher than the statewide rate, and higher than the rate in Burlington, Camden and Middlesex counties.
- Between 2014 and 2016, the percentage of people who speak English less than very well declined from 10.2% to 9.6%.

GAPS

- Mercer County families, people, and children had a higher or equal percentage of an income below federal poverty level than the statewide rate. Seniors, however, had a lower percentage.
- New Jersey and Mercer County residents have a higher percentage of individuals who did not complete a high school education than the *Healthy People 2020* target of 2.1% and was below the State average.

Social Context

ASSETS
- Mercer County's rate of association per 10,000 population (11.3) is higher than the State and comparison counties.
- In 2016, the Mercer County rate of domestic violence arrests was lower than the statewide and the rates in all the comparative counties.

Health and Health Care

ASSETS

- Since 2013, the nonelderly population without health insurance in Mercer County has trended downward. From 2013 through 2015, Mercer County had consistently lower rates of nonelderly population without health insurance than statewide.

GAPS

- Mercer County population to physician ratio was lower than the ratio statewide and below the County Health Rankings benchmark.
- In 2016, Mercer County's ACSC ED visit rate was higher than the statewide rate.
- Mercer County had the sixth highest ACSC ED visit rate of the 21 counties in 2016; there was a 1.2% from the 2013 rate.
- Mercer County children's ACSC ED visit rate was higher than the State. Several Trenton zip codes had ACSC Rates that were two to three times greater than the county.

Neighborhood and Built Environment

ASSETS

- In 2016, the average daily density of fine particulate matter was 8.9 micrograms per cubic meter in Mercer County, lower than the statewide rate and all comparison counties.
- In 2016, 3.65% of Mercer County residents had food insecurity, fewer than all comparative counties.
- Between 2014-2016, there was a 10% decrease in the rate of burglaries in Mercer County.
- In 2016, the Mercer County rate of domestic violence arrests was below the statewide rate and the rates in all the comparative counties.
- In 2016, the rate of deaths due to accidental poisoning and exposure to noxious substances in Mercer County was less than its comparative counties and the rate statewide.

GAPS

- In 2016, 0.80% of children in Mercer County had elevated blood levels. This rate has stayed consistent since 2013 and is higher than the rate statewide and for the comparison counties.
- The rate of deaths due to accidental poisoning and exposure to noxious substances increased between 2015 and 2016.
- Violent crime increased from 2014 to 2016 and has historically been higher than the statewide rate.
- In 2016, the rate of motor vehicle crash deaths was 7.35/100,000 in Mercer County, greater than the statewide rate.

*B.**   HEALTH FACTORS***

Clinical Care Measures

ASSETS

- Mercer County's 2016 primary C-section rate is lower than the State rate (25.2%).
- Countywide, women with a primary C-section trended downward from 2013 through 2015, decreasing from 24.2% to 22.8%. The rate increased again in 2016 (23.3%).

GAPS

- Mercer County's 2016 VBAC rate (14.4%) is higher than the State rate (11.9%) by 2.5 points.
- Mercer County's 2016 inpatient utilization rate was 11.5% higher than the State (160.22/1,000).
- Mercer County's 2016 ED visit rate was 23% greater than State rate.

Health Behaviors

ASSETS

- The percent of Mercer County births to teens age 15-17 trended downward from 2007 through 2016.
- County-wide HIV/AIDS prevalence rates declined between 2013 and 2015, although higher than the County Health Rankings benchmark.

GAPS

- In 2016, only 67.8% of live births to Mercer County moms received first trimester care compared to a high of 86.1% in 2010. Mercer County had the lowest percentage of live births with first trimester prenatal care in all comparative counties. The percentage of Mercer County moms receiving first trimester care was lower than the *Healthy People 2020* target of 77.9%.
- Mercer County had the highest percentage of live births with no prenatal care in the four-county area.
- In 2016, STI rates in Mercer County were higher than the statewide rates and greater than those of Burlington and Middlesex counties.

Individual Behaviors

ASSETS

- In 2016, Mercer County had the lowest percentage of adults in the county area who reported smoking. Between 2014 and 2016, smoking rates declined 9.9 percentage points.
- The binge drinking rate in Mercer County has decreased since 2012, from 15.6% to 12.1%. In 2016, adults in Mercer County who reported binge drinking was lower than its comparison counties.

GAPS

- Over 33% of Mercer County adults reported a BMI at or over 30 in 2016.
- Countywide residents reporting no leisure-time physical activity trended upward from 2014 through 2016, increasing almost 10 percentage points.

Health Screening

ASSETS

- The percentage of women who had a mammogram in the last 2 years increased from 50.5% to 76.4% between 2012-2016, and that percentage exceeded the County Health Rankings benchmark of 71%.
- Between 2012-2016, the number of residents who report ever having a colonoscopy or sigmoidoscopy has increased 15.7 percentage points.
- From 2009 to 2014, the percentage of Mercer County diabetic Medicare enrollees that received screening increased.
- In 2016, nearly 70% of adults 65+ had received a pneumonia shot. This rate is higher than the statewide rate.
- The percent of Mercer County adults over 65 who had a pneumonia vaccine increased from 2012 to 216.

GAPS

- Mercer County has the lowest percentage of women receiving pap tests in the comparative county area and it is below the state rate.
- Over the last six years the percentage of adults who had a flu shot decreased and was lower than the *Healthy People 2020* target of 90%.

Mental Health and Substance Use Utilization

ASSETS

- In 2016, Mercer County had 43% fewer patients hospitalized for mental health conditions than the State.
- Opioid dispensations decreased slightly between 2014 and 2016.

GAPS

- Inpatient Mental Health rates for both Trenton zip codes 08611 and 08608 are noticeably higher than all other comparative figures.
- Across all age cohorts county-wide except for those 0-17, there is an increase in inpatient admissions for substance abuse from 2012 through 2016.
- Countywide, there has been an increase in the rate of ED visits for substance abuse from 2012 through 2016 for all age cohorts except for the 0-17 age cohort. In 2016, Mercer County had a higher rate of residents with an ED visits for substance abuse among all cohorts except for those 0-17 as compared to the State.
- Since 2015, naloxone administrations increased by .03% for New Jersey and .02% for Mercer County.

C.   HEALTH OUTCOMES

Mortality

<u>ASSETS</u>

- Between 2013 and 2016, five of the top 10 age-adjusted mortality rates declined, with greatest decreases in stroke (-14.8%), diabetes mellitus (-3.7%) and Alzheimer's disease (-3.2%).
- In 2016, the mortality rate for heart disease was lower than the statewide rate, and the rates for Burlington and Camden Counties. The mortality rate for heart disease deaths among White Mercer County residents is among the lowest in New Jersey.
- Deaths due to cancer declined 6.7% between 2014 and 2016.
- In 2016, Mercer County's stroke mortality rate was lower than the statewide average and the comparison counties of Burlington and Camden.
- The AAMR for intentional injuries was 27.3% lower than the statewide rate.
- In 2016, the rate for unintentional injuries was lower than the statewide rate and the rate for Burlington, Camden, and Middlesex Counties.
- Between 2013 and 2016, age-adjusted mortality rates for Alzheimer's disease declined from 25 to 24/1,000, or 3.2%.
- Mercer County's suicide rate decreased from 2014 to 2016.

<u>GAPS</u>

- Deaths due to nephritis, nephrotic syndrome, and nephrosis increased.
- Despite outperforming the State, the heart disease mortality rate of 193.0/100,000 remains far higher than the *Healthy People 2020* target of 103.4/100,000. In 2016, the mortality rate for heart disease deaths among Whites was more than 6 times the rate of Hispanics.
- Mortality rates for cancer in Mercer County have been increasing since 2007. The mortality rate for malignant neoplasm deaths among Black Mercer County residents is higher than the rate statewide among Black residents.
- The mortality rate for stroke deaths among Black Mercer County residents is slightly higher than the statewide rate for Black residents.
- The number of years of potential life lost 6,064.41 is higher in Mercer County than statewide and the surrounding counties of Burlington and Middlesex.

Maternal and Child Health

<u>ASSETS</u>

- The Black infant mortality rate declined between 2007-2009.

GAPS

- The infant mortality rate for 2013-2015 was higher than statewide, Burlington and Middlesex County rates and higher than the *Healthy People 2020* and County Health Rankings targets.
- Although the Black infant mortality rate decreased between 2007-2009 the mortality rate in Mercer County is higher than the State and all surrounding counties.
- Mercer County had the second highest percentage of low birth weight infants and the second highest percent of very low birth weight babies among the comparative counties. The percent of low and very low birth weight infants is higher among Blacks than for Whites or Hispanics.

Health and Behavioral Health Status

ASSETS

- Only 14.8% of Mercer County residents report their health as being fair or poor compared to 17.5% of New Jersians. The percentage is lower than the County Health Rankings target.
- Between 2012 and 2016, the percent of Mercer County residents reporting a history of depression decreased.

GAPS

- In 2016, the percent of Mercer County residents reporting 14 or more days as "not good" was in the lowest performing quartile in the State.
- The percentage of Mercer County residents reporting 14 or more days when their mental health was not good is higher than the New Jersey and County Health ranking targets.
- The Mercer County rate for history of depression was higher than the statewide percentage.
- Since 2014, drug overdoses increased across New Jersey, Mercer County, and neighboring counties.

Morbidity

ASSETS

- The 2016 rate of 2.5% for residents reporting angina or coronary heart disease is in the mid-performing quartile in the State.
- In 2016, 4.2% of Mercer county residents reported being told they had a heart attack, lower than the statewide rate and the rate in Burlington and Camden Counties.
- The rate of Mercer County residents hospitalized with a diagnosis of heart attack (2013-2016) was lower than the statewide average.
- Invasive cancer rates for Digestive System Cancer declined between 2008 and 2015 as did Male Genital System and Prostate.

GAPS

- Between 2011 and 2016, the percent of people reporting being told they had a stroke more than doubled. Mercer County's rate of residents reporting a stroke is in the worst performing quartile of New Jersey counties.
- The percentage of residents with high cholesterol was higher than the rate statewide and every comparison county.
- The percent of 2015 Mercer County individuals reporting high blood pressure (29.7%) was higher than the *Healthy People 2020* target.
- Since 2011, the percent of Mercer County residents who had their cholesterol checked and told it was high increased. That percentage was higher than the rate statewide and every comparison county and more than double the *Healthy People 2020* target of 13.5%.
- The invasive breast cancer rate increased 17.8% between 2008 and 2015.
- Mercer County's age-adjusted incidence rates per 100,000 for all five top cancer sites were higher than the State.
- The rate of asthma among Mercer County residents is higher than the statewide rate and rates in Burlington and Middlesex County.
- In 2016, Mercer County had the second highest percentage of patients reporting diabetes among comparison counties. Mercer County is in the middle performing quartile for diabetes as compared to all 21 counties statewide.
- Since 2013, the rate for adults with arthritis increased from 22.1% to 22.9% and has remained slightly lower than the rate statewide.

APPENDICES

Greater Mercer Public Health Partnership

Every year, each of our organizations review data to determine how well our initiatives and programs performed. What became clear to us at the Greater Mercer Public Health Partnership (GMPHP) was how thankful we have been working with the multitude of Mercer County non-profits over the last three years, to complete the 2016 Community Health Improvement Plan (CHIP). We are grateful that the four priority groups (Mental Health, Healthy Eating/Active Living, Chronic Disease, and Transportation) met quarterly for three years to work on their initiatives. Over that time frame, strong collaborations developed that often took the priority groups into new endeavors never thought possible. The Community Advisory Boards (CAB) met bi-annually to collectively learn what each priority group was working on. These meetings were also used as professional educational opportunities, with the following speakers:

Peri Nearon – NJDOH – Shaping NJ
Kate Flewelling – National Network of Libraries of Medicine
Anne Farrell – TCNJ – Professor and Chair of Health and Exercise Science
Cheryl Kastrenakes – Greater Mercer Transportation Management Ass.
Brenda Seals – TCNJ – Professor and Chair, Public Health

Not only did the organizations benefit from these collaborations, but also, GMPHP benefited from the wealth of information and experience the organizations brought to the CHIP. The "World Café" held April 2018, provided structured conversations that shared critical knowledge. From this exercise, we have an analysis of strengths, weaknesses, opportunities, and threats that will guide us in our 2019 CHIP goals. The strengths determined by our CAB were:
- Enjoyed the collaboration between community partners
- Member commitment/involvement
- Shared resources
- Using the CHIP to apply for grants
- Passion to support the underserved
- Members want to be actively engaged and make a difference
- CAB members interest in learning about community health needs

The opportunities suggested were:
- Conduct focus groups – identify health inequities experienced by vulnerable populations.
- Collect mental health and substance abuse data to address mental health needs.
- Professional development training (ex: Lean Six Sigma QI Trainings).
- Work with priority area leaders to develop SMART (Specific, Achievable, Results oriented, Time bound) objectives.

The top accomplishments of the 2016 CHIP include:
- The development and ongoing improvements of a website on which all the non-profits can advertise their programs www.healthymercer.org
- The increased collaborations of chronic disease programs offered in Mercer County.
- The increased health screenings offered in Mercer County.
- Increased awareness of where to find resources available in Mercer County.
- Increased awareness and availability of transportation options in Mercer County.

- Increased grant applications, collaborations, and letters of support within our CAB membership.
- Increased programs and public trainings in mental health and substance abuse - Narcan trainings.
- Increased nutrition education in pre-school and school age groups.
- Increased farmers markets and payment options for WIC and SNAP users.
- A "recess" survey of school nurses that was sent to the legislature when they were formulating the new recess legislation Bill S847 in August 2018.
- A survey of businesses that formulated a Worksite Wellness Summit based on needs in April 2017, and connected businesses with local non-profits that can help them with their worksite policies.

We did face roadblocks that hindered our progress, most notably, the "Recess Book". The College of New Jersey students created a guide for school recess activity, and we have been unable to find help editing the book for publication. This initiative will carry on into our 2019 CHIP, as we strongly believe increasing children's activity at recess will make a difference to their health.

Other roadblocks that were determined at our World Café are:
- Built environment (healthy green spaces)
- Access to healthy affordable foods especially for the underserved
- Access to affordable transportation
- Significant health inequities by zip code
- Objectives in the last CHIP were not always SMART
- Collect more localized data (vulnerable populations by priority area)
- Unidentified unrepresented populations
- Document meetings and conversations with GMPHP leadership

We learned several valuable lessons as we executed the last CHIP, and from this, we hope to improve the next CHIP 2019. As we move forward, GMPHP is committed to:
- Help new CAB members understand the CHA and CHIP process.
- Promote using the CDC "Winnable Battles", County Health Rankings and Roadmaps "Scientifically Supported Programs", Public Health Accreditation Board Standards, and NJDOH Healthy 2020, as guideposts for future projects and initiatives.
- Help members network and find funding for programs and resources.
- Improve the data tracking for the 2019 CHIP that is SMART by purchasing tracking software.
- Improve accountability for the 2019 CHIP

Our CHIP 2016 was truly a "living document", and as we faced roadblocks, new opportunities were fostered and initiated, which always kept us moving forward. We want to thank our supportive board consisting of Capital Health Medical Center, RWJ University Hospital Hamilton, St Francis Medical Center, St Lawrence Rehabilitation Center, Mercer County Human Services, eight health departments, and four community members. They met monthly to build and establish a strong foundation to carry these efforts into the next decade. GMPHP is looking forward to working on the next improvement plan and ultimately, improving the health of Mercer County residents.

Respectfully submitted
Carol Nicholas, BA RN
Project Director
GMPHP

Community Advisory Board Summary Report
Community Health Assessment Preliminary Review
Listening Session
April 25, 2018
Morris Hall 5-7 pm
St. Lawrence Rehabilitation Center, Lawrence Township, NJ

Welcome Remarks: Darlene Hanley, CEO of St. Lawrence Rehabilitation Center

Introductions: Diane Grillo, President of Greater Mercer Public Health Partnership (GMPHP)

Community Health Assessment Data Briefing – Naomi Savitz, New Solutions, Inc.

Naomi provided an overview and brief report on preliminary CHA findings.

Community Health Assessment is a process that:

- Determines and evaluates the state of health and health needs of a local population
- Enables the identification of major risk factors and causes of ill health; and
- Identifies action needed to address these factors

Why do a CHA?

- To provide data for decision-making
- To promote awareness and action
- To satisfy a mandate

A CHA provides valuable information regarding why and how to improve the community's health status. A comprehensive CHNA gathers information using sound data collection methods and reflects the behaviors, beliefs, and demographics of community residents. The process consists of development of a community advisory board, primary research, review of secondary source data, priority setting and plan development, communication plan (all constituents), implementation and evaluation.

Mercer County was split into 5 pie pieces to ensure that each part of the county is well represented. Out of 5 focus groups held between March 5 – 14, 55 people from diverse backgrounds shared their experiences and opinions. Results are broken down by "Definite Improvement" and "Some Improvement". The improvement categories are broken down by municipality in the following table:

Area	Definite Improvement		Some Improvement
Hamilton/Robbinsville	• Clinics for uninsured • Support for disabled • Veterans programs	• Childhood obesity • Senior services availability	• Opioid addiction
Pennington/Hopewell	• Hospital access • Anti-smoking campaign	• Parental support in various areas – medical and emotional	• Information flow • Broader drug/alcohol reach • Mental health support
West Windsor/Hightstown	• Senior transportation • Weekly BP screening • Improved coordination w/ Police • Closer hospital and EMT closer to police	• New leadership • Lock boxes for elderly • Politicians more in touch with community	• Vision/hearing screener availability
City of Trenton	• Employment improved • Young adults doing more in community • More small businesses opening	• Food pantry availability • Heightened community activism/collaboration	n/a
Lawrenceville/Ewing/Princeton	• Improved partnership with law enforcement • General outreach improved • Health services for undocumented population	• Hospitals engaging more • Availability of more physical space • Heightened health focus	n/a

Eight themes were reported in all groups:

1) Community/Network Connectedness/Communication
2) Access to care
3) Mental health –the single greatest concern area that was broadly defined
    - Opioid addiction, Stress/Anxiety management, Suicide prevention
4) Transportation
5) Language barriers/Immigrant population
6) Senior/Adult Needs
    -Also Veterans Services in some areas

7) Education
  -Health, Parenting, Social Media, tutoring programs, bullying
8) Medical Conditions
  - Alzheimer's/Dementia, Asthma, Cancer, Cardiovascular, Diabetes, Hypertension, Childhood Obesity, Chronic Pain Management

Although occasional improvements were noted, respondents characterized access as 'not good' or 'in need' of improvement': this was true across all groups

Access was often intertwined with lack of a broader communication network
- Insurance (lack of expense, cutbacks, poor understanding)
- Appropriate medical care (HCPs, Hospitals, Medication, Mental Health – particularly for low income families, dental/vision)
- Transportation (to reach appropriate medical services)
- Lack of resources (training, public health programs/services, health literacy, etc.)
- Identification of people in need (seniors, undocumented, immigrant population, etc.)
- Other (affordable housing, language barriers, racial barriers)

Using the Tools of Community Engagement in Your Organization – Stephanie Carey, Health Officer (Montgomery/Hopewell Borough/Pennington Borough)

The goal is to engage community members and partners to better address public health issues. Stephanie provided a demonstration to the coalition partners present on how to use the World Café exercise.

What is a World Café?

A World Café or Knowledge Café is a structured conversational process for knowledge sharing in which groups of people discuss a topic at several tables, with individuals switching tables periodically and getting introduced to the previous discussion at their new table by a "table host".

World Café Etiquette and Facilitator Introductions – Carol Nicholas, Director of GMPHP

World Café Etiquette
- Focus on what really matters
- Contribute your ideas and thinking
- Speak your mind and heart with humility.
- Listen to understand.
- Connect your ideas with others.
- Play, doodle and draw
- Have fun!

Tools of Community Engagement
- *These are tools you can take back to your organization to assure your communities' voices are heard!*
- World Café -Collaborative Dialogue for Questions that matter www.theworldcafe.com
- SWOT–Assessing Strengths/ Weaknesses/Opportunities/ Threats
- Appreciative Inquiry-Asking what's best about your organization helps identify its values.
- Affinity Model--gathering comments on a key question without judgment, then identifying common themes

Table Hosts spend 10 minutes gathering feedback (on post-its) and 2 minutes clarifying and identifying themes.

Table Hosts (Facilitators) for World Café Exercise:

Tiffany O'Neal, West Windsor Health Department
Tony Lewis, Robert Wood Johnson Foundation, County Health Rankings
Patricia Dagnall, Retired Health Officer
Devangi Patel, Princeton Health Department

Carol and Stephanie were timekeeper and floater

Table One: Pat -- What does a healthy community look like (define "health")? What do you view as a barrier to a good health in Mercer County? (Community)

Table Two: Toni --Appreciative Inquiry to define organizational values and themes—The theme for your columns may be values-words. What is the best thing about GMPHP? Why are you here tonight? A year from now, what will bring you back to GMPHP? (Organization)

Table Three: Tiffany -- Based on the data you heard tonight, which parts are most relevant to our Community Health Assessment? What/whose input is missing? (CHA) qualitative data and gap analysis from community members.

Table Four: Devangi-- For our 2015-2018 Community Health Improvement Plan implementation, what worked well? What didn't go so well? What lessons did we learn implementing the 2015 CHIP that we can use to do better next time? (CHIP Evaluation)

Questions:

> *Participants started at the table matching the number given to them at Registration.*
>
> *Participants wrote their answers to the questions on post-it notes in 3-5 word phrases. A person could write as many post-its as they want, 1 idea per post-it., and stick on flip chart paper. After 10 minutes (or sooner if they are done), facilitator encouraged the group to spend two minutes clustering the post-its along similar themes, asking questions to clarify, build consensus, and name the theme. A total of 12 minutes per small group, with 2 minute changeovers. (A new flip chart page for each changeover)*

There were a total of 4 rotations to the 4 tables. Final answers were compiled into a table along with identified themes for each of the four questions:

What does a heathy community look like?

Access to healthy food	Walkable communities/Safe Streets	Low/no disease	Employment	Health Knowledge/awareness	Mental Health Wellness	Safety	Built/Clean Environment	Health Systems	Community
Good food security	Safe walking and exercise trails	Lower communicable disease rates	Income (x2)	Informed community members who get regular physicals	Engaged	Safety (x4)	Kids in parks. Trees	Reduce stigmatizing policies, etc. (2x)	Community involvement, hard working, togetherness.
Looks like people eating well	Green space, places to walk, bike, play	Healthy communities = fed, safe + mentally stable	Employment (2x)	Educational, recreational, social opportunities (x5)	Increased self-efficacy	People out and about	Accessible opportunities for active lifestyles (3x)	Healthy community; all people have access to optimal health and shareable resources that are culturally competent (6x)	Healthy communities, emphasis on equity + social justice
Available fresh food and vegetables food options (x2)	Walkable community safe streets and sidewalks	Looks like people active, healthy, productive (3x)	Available clinic/primary care providers	Collaboration among community providers. Coalitions et. Where everybody knows what each agency's specialties are – what populations they serve etc.	Interacting with each other	Synergy amongst the various community service functions. (i.e. EMT, Police, community centers)	Transportation, Parks and fitness centers	Has available health services for all ages, populations, income brackets, and is culturally competent	Community access resources that can help them support their physical, mental, financial health
Access to healthy affordable food (x6)	Walkable	Decreased disease prevalence/incidence and increase quality of life (3x)	Healthy community = $ cycles from rich to poor	Open, honest, dialogue about health and behavioral health issues	People are being their best selves (2x)		Vibrant community, clean air, community gardens/farms	Healthy community: presence of reputable healthcare providers. Services available to all	Healthy community: better than benchmark measuring, active lifestyle opportunities (2x)

What do you view as a barrier to good health in Mercer County?

Insurance	Access to care	Time	Communication	Transportation	Health Literacy	Money/Funding	Access to food	Built environment	Stigma/ community norms
Lack of / cost of insurance (x5)	Education programs to the under/no insured at a low literacy rate and at a convenient place	Time to live healthy	Language barriers (x2)	Lack of transportation (x7)	Low health literacy (& general literacy)	Barriers = 501 (C) (3)/ non profits have little to no $$	Abundance of tobacco and poor food choices at corner stores	Roads not pedestrian friendly	Lack of participation disinterred in joining organizations
	Accessible mental health services, types of docs wanted	Work, time	Lack of communication	Access to health care and transportation	Lack of information (x2)	Socioeconomic barriers and Appropriate resources	Food Concerns about Safety	Safe	Barriers – stigma of addiction and mental health challenges (2X)
	Barriers: access – quantity of providers, insurance coverage, access – hours of day/days of week	9-5 jobs			Information disparities (quality health information)	Low income, poverty and lack of resources			Barriers = food/shelter/safety takes priority over health (preventative)
	Access to care and healthcare				Convoluted healthcare system	Financial advisors and affordable medicine			Lack of emphasis on preventative medicine, Divisiveness and Pre-screening
	Not enough providers take Medicaid/affordable care				Education (x3)	It costs money to be/stay healthy			Cultural practices/behaviors/expectations
	Lack of specialists and access				Fear (x2)	Lack of funds for services (x5)			Marginalization from the community

What is the best thing about GMPHP?

People	Process	Results	Data
Hopefully new members that can add their own experiences/ideas to the group	Collaboration communication between organizations (x11)	Eager now to get the bigger picture	The problems may change but the people who need help are still there
Continued energy and optimism of the leaders and members (x2)	Sharing info and community resources (x6)	Feeling that we made an impact and did not just sit in meetings	To learn more about the community health assessment
Meeting new people who have a passion for public health (x5)	Ongoing engagement in the health of my community	Progress towards CHIP	Knowledge of community resources (x3)
Meeting reps from many organizations	Improving lines of communication among providers, health departments and community organizations	The Impact we can have on the health of communities	Innovative techniques to gather data
The people and networking opportunities (x2)	Listening to the local community		
Best thing: the people involved	Committed to furtherance of CHA/CHIP		
Access to diverse groups and greater input (x4)	Hosting world cafes to share ideas (x2)		
Learning about various organizations and meeting people involved	Networking, partnering, getting things done		
Everyone brings a different perspective to the group	Opportunity for many to come together with a common plan and purpose		

Why are you here tonight?

Continued Energy & Optimism	Engagement/Make a Difference	Leadership	Learn and Share	Networking
We are making progress on transportation committee, we want to keep making progress	I was invited: help the community, share information, collaborate, help college population	Formalize group with community outreach director	To contribute and support the process of CHA/CHIP (x2)	Partnership
I made a commitment	Make Mercer better	New role/responsibility + interest	To share ideas (x5)	Connections and cookies
Because of the "collaborative partnership" among members	To help people work together with the goal to help people and be a part of the solution (x3)	To learn how I can serve mercer county independently +through my organizational position	Get information, raise issues about community needs (9x)	Last minute invite BUT pleasantly surprised to find such a strong network of people to pick people's brains
Passionate people	I was asked to attend	To learn about what others do and all how our agency can assist or provide services to others	To learn about the findings of the process and Mercer County health (x5)	Partnership available in community
Invite from Princeton Health Dept. + passionate about public health	Outreach	I want us to have a well thought out CHA and CHIP	Curiosity	Connecting with people interested in the health of our community
Guilt (I've wanted to engage and had not been able)	Working together to improve health	To represent the people of my community. Rejuvenation		To support the GMPHP, to network with new members. To Collaborate

A year from now, what will you bring back to GMPHP (org)?

Results	Connections/Continued Partnerships	Achieved Common Goals	Learning	Relevance	Community Improvement
Results!	Connections!	Hope…to bring congratulations for accomplishments	It's an ongoing job – always room for improvement	Dedication and vibrancy of mission	The desire to help our community in a positive way
Interest in the process outcomes	And Productive goal-oriented meetings	Achieving goals. Continued movement forward on actions		If my concerns were addressed	Learning ways to improve health of my community
Visible changes in community – implementation process	To know the progress of the community partnership	Clear goals	The chance to reevaluate key points community orgs + assessments, given the dynamic sociopolitical environment around health care	GMPHP as a formal organization determined to have a usable CHIP	Survey will say that we are covering needs. Areas were without health care!
Outcome of the CHA (x2)	Innovative partnerships with school districts that improve health	Working toward common goals as result of needs assessment	Knowledge sharing	To make sure that whatever is working will continue as a need	Community improvement
	Myself, participating in the interagency department work groups	To see what needs were addressed in some way and what still needs to be done	To review CHA-CHIP, involvement with GMPHP, to see who is still involved with GMPHP		
	Reunite with the good, intelligent people on GMPHP		To gain insight into the community's needs and priorities		
	Community				

Based on the data you heard tonight, which parts are most relevant to our community health assessment?

MENTAL HEALTH	ACCESS TO RESOURCES	CHRONIC DISEASE DATA	OVERCOMING BARRIERS	DATA
Mental health and SA issue	- Access to health services (geography, cost, type, insurance) - Access to healthy resources (food, physical activity) (x2)	Chronic disease data is very relevant	- Building healthy habits (food, exercise, health care)	Pregnant and addicted women – assessment of peer use of ATO? Treatment referrals for pregnant women
improving health through integrating behavioral health with physical health care and substance abuse	Barriers to quality health care	- Childhood obesity	Language barriers	Uninsured populations
- Behavioral health is part of overall health	Access to care		- Health care access (affordable, accessible)	Undocumented residential status
- Addiction issues	Lack of access to care		increased access to some health screenings	Childhood obesity
Mental health services/concerns	Health information and access		NJCEED - Health Literacy	
Co-occurring services/concerns	Active living that includes being outside (environment)			Transportation data
Focus on mental health	- Nutrition Food access, chronic disease prevention			behavioral health and substance abuse data
Opioid addiction	Community Resources available to underinsured /no insurance			

Based on the data you heard tonight, which items are missing from our community health assessment?

Representation	Schools/Youth	Medical	Mental Health Services	Funders	Housing/ Environment	Data
Insurance representatives (x3)	Vaping with kids	Access to telemedicine	Mental health providers	Financial coverage	Transportation (x2)	Missing – data from special needs population
School district representation (x3)	Youth (x2)	Appropriate medical care improved. Prenatal, Maternal, Nutrition: would like to see more educational programs and increased access (x2)	Addiction and young people's mental health	Funders	Missing: healthy spaces and living (exposures)	Data missing from underserved populations (e.g. Immigrant, low-income, homeless, addiction) (x2)
Faith-based organizations (x2)	Youth in middle and high schools and dangers of vaping, e-cigarettes	Missing: access to care/insurance (x2)	Mental health of children in school	Accommodating people in "limbo" not needy "enough" too "well-off" according some policies	Housing – safe and affordable	Missing: specific data about respondents (x3)
Missing: sick and elderly: who can't get to meetings (x2)	Gaps: officials in the school system	Opioid crisis for pregnant women and new mothers. As well as methadone for pregnant addicted mothers.	Transitioning people in need of our resources to a more stable point "graduating" people		Access to healthy foods for poorer communities/ people	Missing: the last CHA was not as widely distributed to the minority community and vulnerable groups
Adolescent/ Youth community involvement	School climate and culture leaders	What's missing: opioid crisis in ……?				Missing: sharing the results of the CHA in the larger Public Health Community
Missing: LGBT community, Law enforcement, homeless community, illegal immigrants (x1 each)	Student assistance counselors (in schools) county org?	Missing: Primary Care issues/strategies (prevention of…) (x2)				Multiple agencies are conducting the same survey process at the same time – duplication

For our 2015-2018 Community Health Improvement Plan Implementation, what worked well?

Collaboration	Resources	Data	Commitment to keep on track	Improved Communication	Suggestions	General Comments
The collaborative effort/shared data (x2)	GMPHP resources such as transportation	Worked well – collected large amount of data leading to CHIP (x2)	CHIP – the priority groups had some vigorous members that accomplished many goals, others were not as committed	Permitted access to focus groups. Permitted to participate in focus groups	Narrow down focus group areas	CHIP – used the report to justify prevention of childhood obesity program for grant applications
CHIP – county wide involvement, good process to get to goals	Mental health group creating mental health directory	We were able to do comparative analysis between county and Trenton City	Was centralized. Kept things limited and focused	Well-coordinated. Was some time ago	Make goals more achievable	CHIP 2016 Report - used to justify integrated treatment program for pregnant women and new mothers
Many people and organizations were involved w/ GMPHP	Worksite wellness program went well but not sure about impact	Includes transportation/cancer and previously unrepresented groups	Commitment to keep moving on schedule, time – awareness	Improved agency communication	CHIP-CHA outcomes: WIC/Cornerstone, Health Screenings, Emergency Preparedness Survey = Focus on Prevention	Process is important – thanks for mixing it up
Sharing resources	Transportation grant	Good CHIP - Refocus us on issues, data	Target to measure	Increased awareness	Full day prioritizing meeting	I wasn't part of the development of the plan so I can't speak to the process. The plan looked good.
		Data paralleled the state (x2)	CHIP process good. Focus on problems urgent but no panic. CHA = good focus on data		Report to the community	Helped break down silos
		Identifying partners				Carol is a plus

For our 2015-2018 Community Health Improvement Plan Implementation, what didn't go so well?

Data	Awareness	Reporting	Tracking	Suggestions	General Comments
Lack of drill down data for specific towns	Not familiar or confused with CHA/CHIP (x7)	Have a "website" page for tracking accomplishments or reporting the data	Too many goals (x3)	List accomplishments a report requirement	CHA – I was less familiar with the process than I am in 2018. Therefore, I was not as "invested' in pushing it out.
Needed more external participation	Partners were not aware of results of CHIP	I'm not aware of outcomes so far	Partners didn't assist with implementation	Keeping partners engaged in the process	There has to be value to the meetings
Survey was too long; many people refused to participate especially if language skill were low			Transportation is such a large issues that it is so overwhelming to make progress in a meaningful way. Maybe address the issue depending on the town. Smaller groups within a specific identified problem	Municipality specific selection of strategies and goals. Not every place can do or wants the same – tie back to focus groups and surveys per town	"Not Working" Barriers to Health = example: no rain cover over the Penn/Princeton Emergency Room Entrance Exit
Lofty goals but difficult to measure			The CHA could have been more widely distributed to many different groups		Not actively driving change at Health Systems
Unrepresented portions of mercer county			CHIP implementation tracking. Where is it?		Funding for implementation not available
Last minute collection of surveys	Can't remember data	Some problems (transportation for example) are so large it's hard to see improvement	Limited number of surveys	Problem = no opportunity to focus on design fail, design problems that affect public health	Healthymercer.org always seemed to be "under revision" – hard to use

Greater Mercer Public Health Partnership

SWOT Analysis Based on April 25, 2018 Community World Café Community Engagement Exercise

Strengths	Weaknesses
• CAB member interest in learning about community health needs • Collaboration between community partners • Member commitment/involvement • Shared resources • Using CHIP to apply for grants • Passion to support the underserved • Members want to be actively engaged and make a difference	• Unidentified unrepresented populations • Built environment (healthy/green spaces) • Access to healthy affordable foods especially for underserved • Lack of access to affordable transportation • Significant health inequities by zip code • Document meetings and conversations with GMPHP leadership • Limited internal quality improvement • Objectives weren't SMART • Collect more localized data (vulnerable populations by priority area
Opportunities	**Threats**
• Conduct focus groups Identify health inequities experienced by vulnerable populations • Collect mental health and substance abuse data to address mental health needs • Professional development training (ex:Lean Six Sigma QI Trainings) • Work with Priority Area Leaders to develop SMART objectives	• Lack of awareness of GMPHP's CHA/CHIP process among new members • Lack of funding for local data collection • Funding for programs, marketing and resources • Gaps in accountability in CHIP Implementation

6:50   Wrap up/Next Steps:

- Here is a video about the event: https://youtu.be/DfOSCwWTbbE
- Please complete the survey, and share the survey link: http://www.healthymercer.org/
- Join us for the Community Health Assessment Presentation this summer, and a Community Health Improvement Planning forum in September.

Thank you
